Synopsis

Red Hat Ansible Automation Platform 2.5 Container Release Update

Type/Severity

Security Advisory: Critical

Topic

An update is now available for Red Hat Ansible Automation Platform 2.5

Description

Red Hat Ansible Automation Platform provides an enterprise framework for building, deploying and managing IT automation at scale. IT Managers can provide top-down guidelines on how automation is applied to individual teams, while automation developers retain the freedom to write tasks that leverage existing knowledge without the overhead. Ansible Automation Platform makes it possible for users across an organization to share, vet, and manage automation content by means of a simple, powerful, and agentless language.

Solution

Before applying this update, make sure all previously released errata relevant to your system have been applied.
