A cookie is a small amount of data that is sent to your browser from a web server and stored on your device. The cookie may be placed by Red Hat or by an authorized third party.

When you use this site, Red Hat uses cookies and other technologies which are necessary to enable the basic features of the site to function (Required cookies). Subject to your preferences, Red Hat and its authorized partners may also use cookies to analyze your use of the website to evaluate and improve our performance, to improve our service to you and to personalize your experience (Functional cookies) as well as advertising cookies to show you ads that are more relevant to you (Advertising cookies). We honor the preferences you select.

In addition to the services they provide to Red Hat, certain Red Hat authorized partners may also use this data for their own purposes or for targeted advertising. This activity may qualify as a "sale" or "targeted advertising" under certain data protection laws. You can make choices using the buttons below to allow or prevent such uses.

**Accept default** will keep your preferences set to accept all cookies (Required, Functional and Advertising), which enables us to provide you a personalized web experience and more relevant ads on third party websites. This means that you allow our partners to collect and use this data.

cription

**Required Cookies only** will set your cookie preferences to "Required Cookies" only. This will prevent our partners from collecting and using this data but may also prevent us from providing you a personalized web experience and more relevant ads on third party websites. Cookie preferences will provide further information and allow you to customize your cookie settings. Setting your cookie preferences to "Required Cookies only" will opt you out of "sales" and "targeted advertising".

## Descri

Clearing your browser cookies may delete your cookie preferences. If you re-visit this site after clearing browser cookies, you will need to reset your preferences at that time. If you have set your browser's global privacy settings, then we recognize the global privacy settings from your browser.

A flaw in

he last

occurren

, so this

mismatch

kend

interprets it as destined for another host. This discrepancy enables request-smuggling style attacks, cache poisoning, or bypassing host-based access controls when an attacker supplies duplicate Host headers.

## Statement

This vulnerability is rated Important for Red Hat products that utilize libsoup in environments where applications are exposed via a front proxy. The flaw arises from a discrepancy in how libsoup processes duplicate Host: headers (last-value wins) compared to many proxies (first-value wins). This mismatch

can lead to virtual-host confusion, enabling attackers to bypass host-based access controls or perform cache poisoning. Systems where libsoup applications are directly accessible without an intervening proxy are not affected by this specific issue.

## Mitigation

Mitigation for this issue is either not available or the currently available options don't meet the Red Hat Product Security criteria comprising ease of use and deployment, applicability to widespread installation base or stability.

## Additional information

- Bugzilla 2421349: libsoup: libsoup: Duplicate Host Header Handling Causes Host-Parsing Discrepancy (First- vs Last-Value Wins)
- CWE-444: Inconsistent Interpretation of HTTP Requests ('HTTP Request/Response Smuggling')

Red Hat Enterprise Linux 7 Extended Lifecycle Support

1-10 of 27

Unless explicitly stated as not affected, all previous versions of packages in any minor update stream of a product listed here should be assumed vulnerable, although may not have been subject to full analysis.

## Common Vulnerability Scoring System (CVSS) Score Details

### Important note

CVSS scores for open source components depend on vendor-specific factors (e.g. version or build chain). Therefore, Red Hat's score and impact rating can be different from NVD and other vendors. Red Hat remains the authoritative CVE Naming Authority (CNA) source for its products and services (see Red Hat classifications).

### CVSS v3 Score Breakdown

	Red Hat	NVD
CVSS v3 Base Score	8.2	N/A
Attack Vector	Network	N/A

	Red Hat	NVD
Attack Complexity	Low	N/A
Privileges Required	None	N/A
User Interaction	None	N/A
Scope	Unchanged	N/A
Confidentiality Impact	Low	N/A
Integrity Impact	High	N/A
Availability Impact	None	N/A

## CVSS v3 Vector

**Red Hat:** CVSS:3.1/AV:N/AC:L/PR:N/UI:N/S:U/C:L/I:H/A:N

## Acknowledgements

Red Hat would like to thank Ky0toFu and Sovereign Tech Resilience program for reporting this issue.

## Frequently Asked Questions

Why is Red Hat's CVSS v3 score or Impact different from other vendors? >

My product is listed as "Under investigation" or "Affected", when will Red Hat release a fix for this vulnerability? >

What can I do if my product is listed as "Will not fix"? >

What can I do if my product is listed as "Fix deferred"? >

What is a mitigation? >

I have a Red Hat product but it is not in the above list, is it affected? >

Why is my security scanner reporting my product as vulnerable to this vulnerability even though my product version is fixed or not affected? >

My product is listed as "Out of Support Scope". What does this mean? >
