AccessAly 3.3.2 Release Notes

Posted on January 20, 2020 by Curt Noble

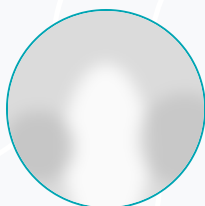

AccessAly 3.3.2 Release Notes: 01/20/2020

Bug Fixes

We've fixed a security vulnerability where malicious people can execute PHP code using the Login Widget.

Over the weekend a security issue was brought to our attention and we've just released a new version of AccessAly that removes the ability to run PHP code through AccessAly.

If you were using the ability to run PHP code in AccessAly, you'll want to find another plugin that specifically allows you to do that.
