AimOne Video Converter is a very powerful and easy-to-use video transcoder that lets you convert videos between almost all the most popular video formats, including AVI, VOB, DAT, 3GP, MP4, WMV, RMVB and the extremely popular FLV format, widely used in YouTube and Metacafe.

The best thing about the program is its simplicity and its ease of use, due mainly to its single-screen user interface, which lets you convert any video in a few seconds without going through multiple menus and configuration windows.

The program can convert in one single operation any number of videos, regardless of their original video format. You can preview any video present in the conversion list using its built-in video player, which helps you to make sure that the right videos have been selected for conversion.

The program also allows you to flip or crop any video, and can also add a watermark to it for copyright protection. One unique feature of this program is its video splitter, which lets you cut multiple videos with just a few mouse clicks. Just like the perfect video converter, the program

also enables you to customize the video resolution, the video frame rate, the audio channels, and the quality, to match your multimedia player.

Shortly, the program is a fully functional video tool and one of the best video converters I have ever used, which is capable of converting videos for your multimedia phone, iPod or DVD player easily and quickly.
