techiot

Very nice and elegant software and start of new series. Well by luck today I took my raspberry 4 8gb with argon m2 case with 500gb ssd running esxi 7 at work and using it to install Proxmox 7 in it and inside a vm with casaos. Probably gonna do it when I come back at home so as to flash bullseye 64bit directly on the m2 drive and not proxmox and casaos. I will come back with details in how it will work. In case someone asks why you do that the answer is a simple one: because I can (and probably because through the process I learn even more stuff)

I Saw It Online

Pretty cool. Kind of reminds me of Rancher for the AIO stuff in Portainer. But easier to install for those not experienced with Docker. I like how it can export a JSON file with your settings. Keep a backup of those files to keep as you install/reinstall quickly.

CasaOS – Du clouders nnel grâce à Docker (x86 / Raspberry Pi)
La définition de « cloud » a vraiment évolué ces dernières années. On est passé de :
« Je vais mettre tous mes fichiers dans le cloud de Google et d'Amazon »
à :
« Je me suis monté un serveur de clouders nnel »
Cela n'a plus aucun sens, mais on va faire comme si de rien n'était. Partons du principe que dans la tête des gens, aujourd'hui, cloud ça veut dire stockage de fichiers ou quelque chose comme ça.

We will love the new AIO functionality! Can we here for new applications which should be available from the store? Would also be great if we could request it from the store itself. For now I would request/suggest: Vaultwarden, b2kstack, Nginx Proxy Manager, MariaDB, Keeu the gateway and have a great 2022!

curl -fsSL https://get.casaos.io | sudo bash

the IceWhale team did a really great job with the CasaOS dashboard! I love my browser homepage!

AnomalyNexus

Casa is really new so I'm surprised it still has some bugs.
Depends on what exactly you're looking for. Most of us I'd imagine are running multiple things on a hypervisor e.g. Proxmox.
And then on top of that something like home assistant for the IoT stuff and something like Portainer to manage a Docker stack.

If you are looking for a free and open source personal cloud system then CasaOS is the best thing you've got. Just install it on a spare PC or home server to use it as a Media Center. Since it supports Plex then you can do it easily. I liked the way it works and a screenshot is amazing. Any app that comes with a web UI and Docker image can be installed on it. I hope they add more apps in the near-built store in the coming days, till then you enjoy what it has to offer now.

These Raspberry Pi projects have been so good! I managed to set up a NextCloud server that I can access with a custom domain from outside my network and it feels very satisfying as I've never done anything like this before.

View original text >>

u/WhtrBbt222

This project needs more supported apps. The custom app is work, but it would be nice to have a much bigger list of auto-install apps. Also add support for Heimdall-style web shortcuts, custom backgrounds, and dashboard customization and I'm all in! Thank you.

A new alternative to Portainer. Great demo and informative as usual. Awaiting for the next videos. Thanks.

 speakerrisk

im already installed the casaOS. its impressive. all works smoothly when installed. and im trying install it on a raspberry pi 4, and it's working. when i use the enclosure and connect it to a tv, its working. its amazing.

 Kyoko

CasaOSは、非常に洗練されたインターフェースと、アプリのインストール方法が優れています。アプリショッププログラムはまだ多くないが、カスタムインストールも簡単に操作できる

 BG9EGA

CasaOS是2021年底新出工具系统，博主也是无意中发现，并用虚拟机体验了一番，发现确实如开发者所说：简单、易用、优雅，非常适合初学者。无论是学习Docker、入门NAS、搭建智能家居、私有云、PT下载、媒体中心、游戏私服...都非常适合。相信CasaOS后期也会加入更多干货，让我们一起探索、学习、折腾吧。
