

Release 3.28.0

[sam](#) 1 November 21, 2025, 12:05am

After the update, we recommend checking:

- ACL setting for detailed view ([see more](#))
- If you are using custom translations, they need to be updated because there are new labels

This release is a big one for us, bringing a wide range of UI improvements across the application. The highlight is the new detailed view modal, which not only shows the item itself but also its full history and all changes in a clear timeline. We also updated the form UI for several sections, improved the customization module across the board, and included a solid batch of bug fixes.

You can read more about:

- [Feature-Detailed view](#)
- [Feature-Sections with new UI](#)
- [Feature-Settings new UI](#)
- [Feature-Policy portal new UI](#)
