

Eddie is a free and open source (GPLv3) OpenVPN and WireGuard wrapper with additional features like:

- User-friendly UI
- Multiplatform support: Windows, macOS, Android, GNU/Linux (with particular effort to support a lot of distro) with multiple architectures: x64, x86, armv7i, aarch64 (Raspberry)
- Censorship counter-measures, like tunnel over SSH, over SSL, direct Tor integration
- Network lock / leak prevention
- Advanced options for DNS, routing, events, leak etc.
- Customizable actions triggered by events
- CLI edition

While Eddie is focused on usage simplicity and quick responsiveness, it also includes features which can be appreciated by the advanced users, such as full control on OpenVPN directives, custom directives and custom routes.

It's integrated with [AirVPN](#) VPN service (required for some feature like tunnel over SSH/SSL), but can be used standalone with any OpenVPN or WireGuard provider (tick *Preferences* -> *Advanced* -> *Multi provider* to add other providers or even remove AirVPN).

## Download - Choose your flavor

Eddie is developed by and is the official client of [AirVPN](#), an OpenVPN and WireGuard based VPN operated by activists in defense of net neutrality, privacy and against censorship.

choose recommended servers?

Can I use keyboard shortcuts aka hot keys in Eddie?

For this reason the support (via forums or tickets) are on AirVPN website.

Anyway, Eddie can be used without an AirVPN subscription, for this reason it's a separate website.
