ie-webviewfoldericon-code-execution (27804) **reported Jul 18, 2006**

You must log in () to use that feature

Microsoft Internet Explorer could allow a remote attacker to execute arbitrary code on the system, caused by an integer underflow vulnerability in the Microsoft Windows Shell that can be exploited when processing a malformed WebViewFolderIcon ActiveX object with an invalid argument to the "setSlice" method. A remote attacker could exploit this vulnerability to execute arbitrary code on the victim's system or cause the victim's browser to crash, if the attacker could persuade the victim to visit a malicious Web page.

Consequences:

Gain Access

Remedy

Apply the appropriate patch for your system, as listed in Microsoft Security Bulletin MS06-057. See References.

CVSS 1.0 Base Score

8

Access Vector	Remote
Access Complexity	High
Authentication	Not Required
Confidentiality Impact	Complete
Integrity Impact	Complete
Availability Impact	Complete

CVSS 1.0 Temporal Score

6.6

Exploitability	Functional
Remediation Level	Official Fix
Report Confidence	Confirmed

Did you know that we have an X-Force Threat Intelligence API?

X-Force threat intelligence is actionable and is available via our APIs (JSON and STIX), which can be ingested into SIEMs. — Read more at our [API documentation \(https://exchange.xforce.ibmcloud.com/api/doc/#Vulnerabilities_get_vulnerabilities_xfid\)](https://exchange.xforce.ibmcloud.com/api/doc/#Vulnerabilities_get_vulnerabilities_xfid)

```
curl -X GET --header 'Accept: application/json' -u {API_KEY:API_PASSWORD} 'https://exchange.xfo
```
