Introduction

Fluent Bit, a CNCF graduated project under the umbrella of Fluentd, announces the availability of v4.1.

In every release, there are many improvements and fixes, on this notes we will refer to the major changes that will make your infrastructure happier :)

Below a list of the highlights of this release:

Highlights

Performance

- 🧠 JSON Parser: Up to 2.5x speedup using new backend based on yyjson
- 🦾 Tail Input: SIMD-enabled parsing yields 3-5% throughput improvement

New Features

- 📊 Multiline: Buffer truncation limit, metrics and diagnostics
- 🌱 Supervisor Mode: Parent process watches child for stability and graceful recovery
- ⌚ Hot Reload Watchdog: Timeout watchdog ensures reload safety
- 🗝️ TLS API Enhancements: Session invalidation and ALPN support added
- 📦 Amazon S3 Output: Parquet Support
 - New Parquet output mode using Apache Arrow (pure C backend).
 - Now supports zstd compression as well.
- ☁️ Opentelemetry Output: AWS SigV4 authentication support

Metrics & Observability

- 🧠 New GPU Metrics collector (AMD)
- 📊 Prometheus Textfile Collector for .prom files

General Improvements

- Plugin Lifecycle: Input plugins (e.g. tcp, event_type, splunk) now support pause/resume
- Unicode Control: escape_unicode config now respected across all JSON-outputting plugins
- TLS: ALPN replaces NPN; better session cleanup
- Windows & Platform Support: Certstore enhancements
- Compatibility for Debian Trixie, Rocky/AlmaLinux 10, CentOS Stream 10
- Bugfixes: Dozens of stability, memory, and logic improvements across HTTP, Winevtlog, compression, multiline, and more

Libraries

- ctraces: upgrade to v1.0.5
- monkey: upgrade to v1.8.5
- wamr: upgrade to v2.4.1

Contributors

On every release, there are many people involved doing contributions on different areas like bug reporting, troubleshooting, documentation and coding, without these contributions from the community, the project won't be the same and won't be in the good shape that it is now. So THANK YOU! to everyone who takes part of this journey!
