This vulnerability was publicly disclosed by Watchtower, without following industry standard responsible disclosure process, and advertised via their X account.

Please Note: This vulnerability does not enable an attacker to use an unauthorized device to exploit FortiManager instances, and does not bypass or negate the patch deployed for [FG-IR-24-423](#).

To exploit this vulnerability, an attacker needs to be in possession of the local certificate and private key of a FortiGate registered and authorised to the targeted FortiManager. In regular conditions, those cannot be extracted, even by a FortiGate's admin.

Note that to the best of our knowledge, this vulnerability has not been observed to be exploited in the wild.
