YongJieLi\_CVE-2025-65212

[gistfile1.txt](#)

```
1 [CVE ID]
2 CVE-2025-65212
3 [PRODUCT]
4 HY511 POE Core < 2.1 && plugins <0.1
5 [VERSION]
6 HY511 POE Core < 2.1 && plugins <0.1
7 [PROBLEM TYPE]
8 Incorrect Access Control
9 [DESCRIPTION]
10 An issue was discovered in NJHYST HY511 POE core before 2.1 and plugins before 0.1.
11 The vulnerability stems from the device's insufficient cookie verification,
12 allowing an attacker to directly request the configuration file address and download the c
13 without logging into the device management backend. By reading the corresponding username
14 in the core configuration file, the attacker can directly log in to the backend, thereby b
```
