Advis

When you use this site, Red Hat uses cookies and other technologies which are necessary to enable the basic features of the site to function (Required cookies). Subject to your preferences, Red Hat and its authorized partners may also use cookies to analyze your use of the website to evaluate and improve our performance, to improve our service to you and to personalize your experience (Functional cookies) as well as advertising cookies to show you ads that are more relevant to you (Advertising cookies). We honor the preferences you select.

Overview

Updated In

Synop

Critical:

In addition to the services they provide to Red Hat, certain Red Hat authorized partners may also use this data for their own purposes or for targeted advertising. This activity may qualify as a "sale" or "targeted advertising" under certain data protection laws. You can make choices using the buttons below to allow or prevent such uses.

Type/

Security

Accept default will keep your preferences set to accept all cookies (Required, Functional and Advertising), which enables us to provide you a personalized web experience and more relevant ads on third party websites. This means that you allow our partners to collect and use this data.

Topic

Red Hat updates

This rele

Required Cookies only will set your cookie preferences to "Required Cookies" only. This will prevent our partners from collecting and using this data but may also prevent us from providing you a personalized web experience and more relevant ads on third party websites. Cookie preferences will provide further information and allow you to customize your cookie settings. Setting your cookie preferences to "Required Cookies only" will opt you out of "sales" and "targeted advertising".

Clearing your browser cookies may delete your cookie preferences. If you re-visit this site after clearing browser cookies, you will need to reset your preferences at that time. If you have set your browser's global privacy preferences to "Block all cookies" you will need to change this preference to "Allow all cookies" in order to use this site.

Description

Red Hat OpenShift Container Platform is Red Hat's cloud computing Kubernetes application platform solution designed for on-premise or private cloud deployments.

This advisory contains the container images for Red Hat OpenShift Container Platform 4.16.0. See the following advisory for the RPM packages for this release:

<https://access.redhat.com/errata/RHSA-2024:0045> 

Space precludes documenting all of the container images in this advisory. See the following Release Notes documentation, which will be updated shortly for this release, for details about these changes:

https://docs.openshift.com/container-platform/4.16/release_notes/ocp-4-16-release-notes.html 

Security Fix(es):

- webpack-dev-middleware: lack of URL validation may lead to file leak

(CVE-2024-29180)

- helm: shows secrets with --dry-run option in clear text (CVE-2019-25210)
- opentelemetry: DoS vulnerability in otelhttp (CVE-2023-45142)
- golang: net/http/cookiejar: incorrect forwarding of sensitive headers and

cookies on HTTP redirect (CVE-2023-45289)

- opentelemetry-go-contrib: DoS vulnerability in otelgrpc due to unbound

cardinality metrics (CVE-2023-47108)

- ssh: Prefix truncation attack on Binary Packet Protocol (BPP)

(CVE-2023-48795)

- coredns: CD bit response is cached and served later (CVE-2024-0874)
- quic-go: memory exhaustion attack against QUIC's connection ID mechanism

(CVE-2024-22189)

- golang: crypto/x509: Verify panics on certificates with an unknown public

key algorithm (CVE-2024-24783)

- golang: net/mail: comments in display names are incorrectly handled

(CVE-2024-24784)

- golang: html/template: errors returned from MarshalJSON methods may break

template escaping (CVE-2024-24785)

- golang-protobuf: encoding/protojson, internal/encoding/json: infinite

loop in protojson.Unmarshal when unmarshaling certain forms of invalid JSON (CVE-2024-24786)

- cloudevents/sdk-go: usage of WithRoundTripper to create a Client leaks

credentials (CVE-2024-28110)

- jose: resource exhaustion (CVE-2024-28176)
- jose-go: improper handling of highly compressed data (CVE-2024-28180)
- follow-redirects: Possible credential leak (CVE-2024-28849)

For more details about the security issue(s), including the impact, a CVSS score, acknowledgments, and other related information, refer to the CVE page(s) listed in the References section.

All OpenShift Container Platform 4.16 users are advised to upgrade to these updated packages and images when they are available in the appropriate release channel. To check for available updates, use the OpenShift CLI (oc) or web console. Instructions for upgrading a cluster are available at https://docs.openshift.com/container-platform/4.16/updating/updating_a_cluster/updating-cluster-cli.html 

Solution

For OpenShift Container Platform 4.16 see the following documentation, which will be updated shortly for this release, for important instructions on how to upgrade your cluster and fully apply this errata update:

https://docs.openshift.com/container-platform/4.16/release_notes/ocp-4-16-release-notes.html 

You may download the oc tool and use it to inspect release image metadata for x86_64, s390x, ppc64le, and aarch64 architectures. The image digests may be found at <https://quay.io/repository/openshift-release-dev/ocp-release?tab=tags>. 

The sha values for the release are

(For x86_64 architecture)

The image digest is

sha256:3717338045df06e31effea46761b2c7e90f543cc4f00547af8158dd6aea868c3

(For s390x architecture)

The image digest is

sha256:f02384fd3022a53fa24e142c3d8eb51547f566611a9dd560d5bfeabab1e578da

(For ppc64le architecture)

The image digest is

sha256:500926479acad10193dbf6ea3944e23b92ff004bcf7bfb7e85728f1b8cffe2b2

(For aarch64 architecture)

The image digest is

sha256:817126345d1ee68397634303571632c5cc8938cd4d59f940803ab38d8e6799e3

All OpenShift Container Platform 4.16 users are advised to upgrade to these updated packages and images when they are available in the appropriate release channel. To check for available updates, use the OpenShift CLI (oc) or web console. Instructions for upgrading a cluster are available at https://docs.openshift.com/container-platform/4.16/updating/updating_a_cluster/updating-cluster-cli.html 

Affected Products

- Red Hat OpenShift Container Platform 4.16 for RHEL 9 x86_64
- Red Hat OpenShift Container Platform for Power 4.16 for RHEL 9 ppc64le
- Red Hat OpenShift Container Platform for IBM Z and LinuxONE 4.16 for RHEL 9 s390x
- Red Hat OpenShift Container Platform for ARM 64 4.16 for RHEL 9 aarch64

Fixes

- BZ - 2219234  - CVE-2024-0874 coredns: CD bit response is cached and served later
- BZ - 2245180  - CVE-2023-45142 opentelemetry: DoS vulnerability in otelhttp
- BZ - 2251198  - CVE-2023-47108 opentelemetry-go-contrib: DoS vulnerability in otelgrpc due to unbound cardinality metrics
- BZ - 2254210  - CVE-2023-48795 ssh: Prefix truncation attack on Binary Packet Protocol (BPP)
- BZ - 2268018  - CVE-2023-45289 golang: net/http/cookiejar: incorrect forwarding of sensitive headers and cookies on HTTP redirect
- BZ - 2268019  - CVE-2024-24783 golang: crypto/x509: Verify panics on certificates with an unknown public key algorithm
- BZ - 2268021  - CVE-2024-24784 golang: net/mail: comments in display names are incorrectly handled
- BZ - 2268022  - CVE-2024-24785 golang: html/template: errors returned from MarshalJSON methods may break template escaping
- BZ - 2268046  - CVE-2024-24786 golang-protobuf: encoding/protojson, internal/encoding/json: infinite loop in protojson.Unmarshal when unmarshaling certain forms of invalid JSON
- BZ - 2268201  - CVE-2019-25210 helm: shows secrets with --dry-run option in clear text
- BZ - 2268372  - CVE-2024-28110 cloudevents/sdk-go: usage of WithRoundTripper to create a Client leaks credentials

The Red Hat security contact is secalert@redhat.com. More contact details at <https://access.redhat.com/security/team/contact/>.

The image shows a dark-themed navigation bar for the Red Hat website. On the left is the Red Hat logo, consisting of a red fedora hat icon and the text "Red Hat". On the right are four social media icons: LinkedIn, YouTube, Facebook, and X. Below the logo and icons is a vertical list of four menu items: "Quick Links", "Help", "Site Info", and "Related Sites". Each item has a white downward-pointing chevron icon to its right, indicating a dropdown menu.
