Topic

New Red Hat Single Sign-On 7.6.8 deliverables are now available for Red Hat Enterprise Linux 7.

This is an enhancement and security update with Important impact rating and package name 'rh-sso7-keycloak'. A Common Vulnerability Scoring System (CVSS) base score, which gives a detailed severity rating, is available for each vulnerability from the CVE link(s) in the References section.

Description

Red Hat Single Sign-On 7.6 is a standalone server, based on the Keycloak project, that provides authentication and standards-based single sign-on capabilities for web and mobile applications.

This release of Red Hat Single Sign-On 7.6.8 on RHEL 7 serves as a replacement for Red Hat Single Sign-On 7.6.7, and includes bug fixes, security updates and enhancements which are linked to in the References.

Security Fix(es):

- Authorization Bypass (CVE-2023-6544)
- Log Injection during WebAuthn authentication or registration (CVE-2023-6484)
- path transversal in redirection validation (CVE-2024-1132)
- unvalidated cross-origin messages in checkLoginIframe leads to DDoS (CVE-2024-1249)
- undertow: Out-of-memory Error after several closed connections with wildfly-http-client protocol (CVE-2024-1635)

For more details about the security issue(s), including the impact, a CVSS score, and other related information, refer to the CVE page(s) listed in the References section.

Solution

Before applying this update, make sure all previously released errata relevant to your system have been applied.

The image shows a dark-themed navigation bar for the Red Hat website. On the left is the Red Hat logo, which consists of a red fedora hat icon followed by the text "Red Hat" in white. On the right side of the bar are four social media icons: LinkedIn, YouTube, Facebook, and X. Below the bar is a vertical menu with four items: "Quick Links", "Help", "Site Info", and "Related Sites". Each item is followed by a white downward-pointing chevron icon, indicating that these are expandable sections.
