## Topic

An update is now available for Red Hat build of Keycloak.

Red Hat Product Security has rated this update as having a security impact of Important. A Common Vulnerability Scoring System (CVSS) base score, which gives a detailed severity rating, is available for each vulnerability from the CVE link(s) in the References section.

## Description

Red Hat build of Keycloak 22.0.10 is a standalone server, based on the Keycloak project, that provides authentication and standards-based single sign-on capabilities for web and mobile applications.

Security Fix(es):

- path transversal in redirection validation (CVE-2024-1132)
- org.keycloak.protocol.oidc: unvalidated cross-origin messages in checkLoginIframe leads to DDoS (CVE-2024-1249)
- secondary factor bypass in step-up authentication (CVE-2023-3597)
- Authorization Bypass (CVE-2023-6544)

- XSS via assertion consumer service URL in SAML POST-binding flow (CVE-2023-6717)
- session hijacking via re-authentication (CVE-2023-6787)
- impersonation via logout token exchange (CVE-2023-0657)
- Log Injection during WebAuthn authentication or registration (CVE-2023-6484)

For more details about the security issue(s), including the impact, a CVSS score, acknowledgments, and other related information, refer to the CVE page(s) listed in the References section.

## Solution

Before applying this update, make sure all previously released errata relevant to your system have been applied.

For details on how to apply this update, refer to:
