Type/Severity

Security Advisory: Moderate

Topic

Red Hat OpenShift Container Platform release 4.17.0 is now available with updates to packages and images that fix several bugs and add enhancements.

This release includes a security update for Red Hat OpenShift Container Platform 4.17.

Red Hat Product Security has rated this update as having a security impact of Moderate. A Common Vulnerability Scoring System (CVSS) base score, which gives a detailed severity rating, is available for each vulnerability from the CVE link(s) in the References section.

Description

Red Hat OpenShift Container Platform is Red Hat's cloud computing Kubernetes application platform solution designed for on-premise or private cloud deployments.

This advisory contains the container images for Red Hat OpenShift Container Platform 4.17.0. See the following advisory for the RPM packages for this release:

https://access.redhat.com/errata/RHSA-2024:3722

Space precludes documenting all of the container images in this advisory. See the following Release Notes documentation, which will be updated shortly for this release, for details about these changes:

https://docs.openshift.com/container-platform/4.17/release_notes/ocp-4-17-release-notes.html

Security Fix(es):

- hashicorp/vault: vault enterprise's sentinel RGP policies allowed for

cross-namespace denial of service (CVE-2023-3775)

- hashicorp/vault: Google Cloud Secrets Engine Removed Existing IAM

Conditions When Creating / Updating Rolesets (CVE-2023-5077)

- hashicorp vault: inbound client requests can trigger a denial of service

(CVE-2023-5954)

- ssh: Prefix truncation attack on Binary Packet Protocol (BPP)

(CVE-2023-48795)

- containers/image: digest type does not guarantee valid type

(CVE-2024-3727)

- golang-protobuf: encoding/protojson, internal/encoding/json: infinite

loop in protojson.Unmarshal when unmarshaling certain forms of invalid JSON
(CVE-2024-24786)

- golang: archive/zip: Incorrect handling of certain ZIP files

(CVE-2024-24789)

- helm: Dependency management path traversal (CVE-2024-25620)
- jose-go: improper handling of highly compressed data (CVE-2024-28180)

For more details about the security issue(s), including the impact, a CVSS score, acknowledgments, and other related information, refer to the CVE page(s) listed in the References section.

All OpenShift Container Platform 4.17 users are advised to upgrade to these updated packages and images when they are available in the appropriate release channel. To check for available updates, use the OpenShift CLI (oc) or web console. Instructions for upgrading a cluster are available at https://docs.openshift.com/container-platform/4.17/updating/updating_a_cluster/updating-cluster-cli.html

Solution

For OpenShift Container Platform 4.17 see the following documentation, which will be updated shortly for this release, for important instructions on how to upgrade your cluster and fully apply this asynchronous errata update:

https://docs.openshift.com/container-platform/4.17/release_notes/ocp-4-17-release-notes.html

You may download the oc tool and use it to inspect release image metadata for x86_64, s390x, ppc64le, and aarch64 architectures. The image digests may be found at https://quay.io/repository/openshift-release-dev/ocp-release?tab=tags.

The sha values for the release are

(For x86_64 architecture)
The image digest is
