Security Advisory: Important

Topic

Red Hat OpenShift Container Platform release 4.15.37 is now available with updates to packages and images that fix several bugs and add enhancements.

This release includes a security update for Red Hat OpenShift Container Platform 4.15.

Red Hat Product Security has rated this update as having a security impact of Important. A Common Vulnerability Scoring System (CVSS) base score, which gives a detailed severity rating, is available for each vulnerability from the CVE link(s) in the References section.

Description

Red Hat OpenShift Container Platform is Red Hat's cloud computing Kubernetes application platform solution designed for on-premise or private cloud deployments.

This advisory contains the container images for Red Hat OpenShift Container Platform 4.15.37. See the following advisory for the RPM packages for this release:

<https://access.redhat.com/errata/RHSA-2024:8428>

Space precludes documenting all of the container images in this advisory. See the following Release Notes documentation, which will be updated shortly for this release, for details about these changes:

https://docs.openshift.com/container-platform/4.15/release_notes/ocp-4-15-release-notes.html 

Security Fix(es):

- go-git: Maliciously crafted Git server replies can lead to path traversal and RCE on go-git clients (CVE-2023-49569)
- golang: net/http, x/net/http2: unlimited number of CONTINUATION frames causes DoS (CVE-2023-45288)
- encoding/gob: golang: Calling Decoder.Decode on a message which contains deeply nested structures can cause a panic due to stack exhaustion (CVE-2024-34156)
- containers/image: digest type does not guarantee valid type (CVE-2024-3727)
- net/http:  Denial of service due to improper 100-continue handling in net/http (CVE-2024-24791)
- cloudevents/sdk-go: usage of WithRoundTripper to create a Client leaks credentials (CVE-2024-28110)
- jose-go: improper handling of highly compressed data (CVE-2024-28180)
- go/parser: golang: Calling any of the Parse functions containing deeply nested literals can cause a panic/stack exhaustion (CVE-2024-34155)
- go/build/constraint: golang: Calling Parse on a "// +build" build tag line with deeply nested expressions can cause a panic due to stack exhaustion (CVE-2024-34158)

For more details about the security issue(s), including the impact, a CVSS score, acknowledgments, and other related information, refer to the CVE page(s) listed in the References section.

All OpenShift Container Platform 4.15 users are advised to upgrade to these updated packages and images when they are available in the appropriate release channel. To check for available updates, use the OpenShift CLI (oc) or web console. Instructions for upgrading a cluster are available at https://docs.openshift.com/container-platform/4.15/updating/updating_a_cluster/updating-cluster-cli.html 

Solution

For OpenShift Container Platform 4.15 see the following documentation, which will be updated shortly for this release, for important instructions on how to upgrade your cluster and fully apply this asynchronous errata update:

https://docs.openshift.com/container-platform/4.15/release_notes/ocp-4-15-release-notes.html 

You may download the oc tool and use it to inspect release image metadata for x86_64, s390x, ppc64le, and aarch64 architectures. The image digests may be found at <https://quay.io/repository/openshift-release-dev/ocp-release?tab=tags>. 

The sha values for the release are as follows:

(For x86_64 architecture)

The image digest is

sha256:da7da5023f153df1417ead29ed0a6e0998c3016a4173ca1956cf05da918b6ccb

(For s390x architecture)

The image digest is

sha256:e128f95fd4c5edb0fd632f21a9536a0d83ee160abc3c207209e63811db61f1b5

(For ppc64le architecture)

The image digest is

sha256:b28ec45481140342793dec40424d8c775f6cceabc626b1591f62da8eea206648

(For aarch64 architecture)

The image digest is

sha256:4a2cb3e13cdf9d41c5514355c8596e61883b4870b89876f906d5ec44653138be

All OpenShift Container Platform 4.15 users are advised to upgrade to these updated packages and images when they are available in the appropriate release channel.
