## Topic

An update for skopeo is now available for Red Hat Enterprise Linux 9.

Red Hat Product Security has rated this update as having a security impact of Moderate. A Common Vulnerability Scoring System (CVSS) base score, which gives a detailed severity rating, is available for each vulnerability from the CVE link(s) in the References section.

## Description

The skopeo command lets you inspect images from container image registries, get images and image layers, and use signatures to create and verify files.

## Security Fix(es):

- containers/image: digest type does not guarantee valid type (CVE-2024-3727)
- golang: net: malformed DNS message can cause infinite loop (CVE-2024-24788)
- go-retryablehttp: [↗](#) url might write sensitive information to log file (CVE-2024-6104)
- net/http: [↗](#) Denial of service due to improper 100-continue handling in net/http (CVE-2024-24791)

For more details about the security issue(s), including the impact, a CVSS score, acknowledgments, and other related information, refer to the CVE page(s) listed in the References section.

## Additional Changes:
