

## RHSA-2025:18219 - Security Advisory

Issued: 2025-10-16    Updated: 2025-10-16

[Overview](#)[Updated Images](#)

### Synopsis

cert-manager Operator for Red Hat OpenShift 1.16.0

### Type/Severity

Security Advisory: Important

### Topic

cert-manager Operator for Red Hat OpenShift 1.16.0

### Description

The cert-manager Operator for Red Hat OpenShift builds on top of Kubernetes, introducing certificate authorities and certificates as first-class resource types in the Kubernetes API. This makes it possible to provide certificates-as-a-service to developers working within your Kubernetes cluster.

### Solution

Before applying this update, make sure all previously released errata relevant to your system have been applied.

The steps to apply the upgraded images are different depending on the installation plan approval policy you used when installing the cert-manager Operator for Red Hat OpenShift.

- If the approval policy is set to `Automatic`, then the Operator will be upgraded automatically when there is a

new version of the Operator. No further action is required to upgrade. This is the default setting.

- If you changed the approval policy to `Manual`, then you must manually approve the upgrade to the Operator.

See [https://docs.openshift.com/container-platform/latest/security/cert\\_manager\\_operator/index.html](https://docs.openshift.com/container-platform/latest/security/cert_manager_operator/index.html) for additional information.
