Overview When you use this site, Red Hat uses cookies and other technologies which are necessary to enable the basic features of the site to function (Required cookies). Subject to your preferences, Red Hat and its authorized partners may also use cookies to analyze your use of the website to evaluate and improve our performance, to improve our service to you and to personalize your experience (Functional cookies) as well as advertising cookies to show you ads that are more relevant to you (Advertising cookies). We honor the preferences you select.

Red Hat /

Availabilit fixes, and

Required Cookies only will set your cookie preferences to "Required Cookies" only. This will prevent our partners from collecting and using this data but may also prevent us from providing you a personalized web experience and more relevant ads on third party websites. Cookie preferences will provide further information and allow you to customize your cookie settings. Setting your cookie preferences to "Required Cookies only" will opt you out of "sales" and "targeted advertising".

Red Hat Advanced Cluster Management for Kubernetes provides the capabilities to address common challenges that administrators and site reliability engineers face as they work across a range of public and private cloud environments. Clusters and applications are all visible and managed from a single console—with security policy built in.

This advisory contains the container images for Red Hat Advanced Cluster Management for Kubernetes, which add new features and enhancements, bug fixes, and updated container images. See the following Release Notes documentation, which will be updated shortly for this release, for additional details about this release:

https://docs.redhat.com/en/documentation/red_hat_advanced_cluster_management_for_kubernetes/2.13/html-single/release_notes/index#acm-release-notes

Solution

Before you apply this update, make sure all previously released errata that are relevant to your system are applied.

For details on how to apply this update, refer to:

<https://access.redhat.com/articles/11258>

Fixes

- [ACM-22364](#) - [ACM 2.13] The Repository/Source Code link for the operator is missing from the operator installation/overview window.
- [ACM-23944](#) - ACM console shows updates for HCP BareMetal clusters but upgrade option is greyed out despite valid channel configuration 2.13
- [ACM-24089](#) - [2.13] ApplicationSubscription unable to handle Kustomization from ObjectBucket Channel
- [ACM-24721](#) - console-mce pod CrashLoopBackOff due to probe failure [release-2.13]
- [ACM-24922](#) - [2.13] Using multiple metric-collector workers may cause loss of metrics due to race condition
- [ACM-27638](#) - console-mce-console readiness and liveness probe failures at scale during ACM ZTP with AAP and EDA
