# ACPT Changelog — Version History

don't show BETA versions

29TH OCTOBER 2026

## 2.1.9

FIX Updating from ACPT 2.1.7 or older no longer shows an error message at the end of the update

FIX Activating ACPT while ACPT Lite is active no longer crashes, and your Lite post types, taxonomies and field groups are imported

28TH OCTOBER 2026

## 2.1.8

FIX Saving a post no longer crashes when another plugin loads a newer version of a library ACPT uses

IMPROVEMENT ACPT now bundles its own copy of every library it uses, so other plugins can no longer break it, or be broken by it

We use cookies on our website to give you the most relevant experience by remembering your preferences and repeat visits. By clicking “Accept All”, you consent to the use of ALL the cookies. However, you may visit "Cookie Settings" to provide a controlled consent.

Cookie Settings Accept All

ACPT

FIX A required field hidden by its conditions no longer stops the post from saving

FIX A repeater sub-field named "type" is returned again when you read the repeater in code

FIX Minimum and maximum length limits count accented letters as one character

FIX Date & time values in the standard format (like 2026-10-26 14:30:00) are accepted again

FIX Saved ACPT blocks no longer show as "unsupported" in the block editor, including in GeneratePress Elements

FIX Image, file and gallery fields print their URL in dynamic block templates

FIX Bricks filters work on post types whose fields come from a custom table

FIX WPML and Polylang can show a different image per language in image, gallery and other media fields

22ND OCTOBER 2026

## 2.1.7

NEW A new "Feeds" option on post types turns off the post type's archive feed

FIX Saving a field group no longer renames fields that share a name with a field in another box, so their values no

We use cookies on our website to give you the most relevant experience by remembering your preferences and repeat visits. By clicking “Accept All”, you consent to the use of ALL the cookies. However, you may visit "Cookie Settings" to provide a controlled consent.

Cookie Settings Accept All

since 2.1.0

FIX Table cells no longer get extra backslashes after a slash, and backslashes you type are kept

FIX The phone field shows the saved country on user profiles and term screens

FIX Custom table date columns with a custom format, like just the year, save correctly

FIX Relationship fields that point to another custom table show the related records, also in Bricks

FIX "Set as post thumbnail" now works for gallery and image columns in custom tables

FIX [Security] Values shown in the post type list filters are now escaped

FIX [Security] Custom table values can no longer be used to inject PHP objects

16TH OCTOBER 2026

## 2.1.6

FIX The "Manage" button on a dataset opens the dataset again, so you can edit its items

FIX Custom table data saved from a table group shown as tabs stays linked to its post, including in Bricks query loops

We use cookies on our website to give you the most relevant experience by remembering your preferences and repeat visits. By clicking “Accept All”, you consent to the use of ALL the cookies. However, you may visit "Cookie Settings" to provide a controlled consent.

Cookie Settings Accept All

ACPT

FIX The icon picker no longer gets blocked by the icon service, also in repeater rows

FIX After an update, the admin always loads the new version of ACPT's scripts

FIX Bricks conditions that compare a toggle field with its translated label work again

FIX Elementor Pro no longer crashes on an empty select field shown as a label

13TH OCTOBER 2026

## 2.1.5

NEW A new "Show meta box" taxonomy option hides the default taxonomy box on the classic edit screen

IMPROVEMENT Term pickers show child terms under their parent, indented by level

IMPROVEMENT The field builder sidebar stays in view while you scroll long field lists

IMPROVEMENT Custom tables that can't be synced now explain what's wrong and how to fix it, instead of showing a database error

FIX Post, term and user select fields load again for editors and other non-admin users

We use cookies on our website to give you the most relevant experience by remembering your preferences and repeat visits. By clicking “Accept All”, you consent to the use of ALL the cookies. However, you may visit "Cookie Settings" to provide a controlled consent.

Cookie Settings Accept All

ACPT

FIX Changing a field's type no longer breaks the page where the field is shown

FIX The icon picker shows icons correctly again and no longer gets blocked when you search

8TH OCTOBER 2026

## 2.1.4

FIX Saving a post in the block editor keeps your custom field values again

IMPROVEMENT The edit screen loads much faster on posts with large repeaters

FIX Date and time fields are saved in a standard format again, so page builders and date sorting read them correctly

FIX Date and time fields inside repeaters show their values again, including in Bricks query loops

FIX Text editors in custom fields no longer go blank in the block editor

FIX Relationship fields with a maximum number of items load correctly again

FIX Posts with damaged repeater or flexible content data can be opened and edited again

We use cookies on our website to give you the most relevant experience by remembering your preferences and repeat visits. By clicking “Accept All”, you consent to the use of ALL the cookies. However, you may visit "Cookie Settings" to provide a controlled consent.

Cookie Settings Accept All

ACPT

FIX The "Leading field" option of repeaters and flexible content lists your fields again

IMPROVEMENT Conditional rendering can use fields from any box of the same field group

FIX Custom table records with a relationship can be saved from the admin again

6TH OCTOBER 2026

## 2.1.3

NEW The sidebar of the field builders can now be collapsed, giving your fields the full width on smaller screens

IMPROVEMENT The field builders work better on laptops and small screens, with no more overlapping or cut-off fields, buttons and names

FIX Forms send email again when you use a plugin that replaces WordPress' mail function, like ActiveCampaign Postmark

FIX Updating the plugin now always installs the latest version

FIX Fixed a crash that locked you out of the admin when two custom tables were linked to each other

FIX JSON saved in a Textarea field is now kept exactly as typed, line breaks included

We use cookies on our website to give you the most relevant experience by remembering your preferences and repeat visits. By clicking “Accept All”, you consent to the use of ALL the cookies. However, you may visit "Cookie Settings" to provide a controlled consent.

Cookie Settings Accept All

ACPT

FIX Bricks: Toggle fields work in element conditions on non-English sites

30TH SEPTEMBER 2026

## 2.1.2

FIX Bulk Edit in the post list no longer empties ACPT fields you left blank

FIX Editor fields inside repeaters keep their formatting when you save

FIX JSON saved in a Textarea field is now kept exactly as typed

FIX A 0 you save is now shown in the admin, and blank Number, Currency, Weight and Length fields stay blank instead of becoming 0

FIX The currency, weight or length unit you choose is kept even when no amount is entered

FIX Time fields show their values again when saved in a different time format than the site's

FIX Fixed a crash in the admin when used alongside some custom login URL plugins

FIX Pagination works again in the Meta Keys Manager, Datasets, WooCommerce product data and Custom Tables lists

We use cookies on our website to give you the most relevant experience by remembering your preferences and repeat visits. By clicking “Accept All”, you consent to the use of ALL the cookies. However, you may visit "Cookie Settings" to provide a controlled consent.

Cookie Settings Accept All

ACPT

FIX Custom table column settings are no longer lost on save, and duplicating a column keeps its settings

NEW Currency columns in custom tables now have a "Default currency" setting

FIX Number, Currency, Weight and Length fields in forms now accept 0 and have no limits unless you set them

FIX Bricks: Text fields work in link settings, and Date/Time fields show their "after" text

FIX ACPT fields show in the Site Editor's Block Bindings panel when switching templates

FIX Divi 5: Editor fields keep their formatting in ACPT Dynamic Data

25TH SEPTEMBER 2026

## 2.1.1

FIX Fixed a crash on post type pages when using SEOPress and an ACPT field is empty or set to 0

FIX ACPT blocks (including the Basic fields block) and Dynamic Blocks show their values on the front end again

FIX Fixed saving a field group failing with a "Value key is mandatory" error

FIX Fixed saving a field group with an "All users" or "All comments" location rule

We use cookies on our website to give you the most relevant experience by remembering your preferences and repeat visits. By clicking “Accept All”, you consent to the use of ALL the cookies. However, you may visit "Cookie Settings" to provide a controlled consent.

Cookie Settings Accept All

ACPT

FIX Required fields now accept 0 as a valid value

FIX Field groups now show on taxonomies created by other plugins, such as WooCommerce product categories

FIX Link fields without link text work again in Elementor, Bricks, Divi, Oxygen and other integrations

FIX [Security] Front-end forms now respect ACPT's field and table permissions

FIX Fixed the Basic fields block showing "Error loading block" in the Site Editor

FIX Maps now load correctly when other ACPT fields are on the same page

IMPROVEMENT Hardened the Breakdance integration and ACPT's error logging so a single failing field can no longer break a whole page

IMPROVEMENT Improved the REST API for updating field groups, and fixed PHP 8.4 deprecation notices

21ST SEPTEMBER 2026

## 2.1.0

NEW Custom Content Types (CCT): build fully custom database tables from the admin, independent of post meta, with their own REST API

We use cookies on our website to give you the most relevant experience by remembering your preferences and repeat visits. By clicking “Accept All”, you consent to the use of ALL the cookies. However, you may visit "Cookie Settings" to provide a controlled consent.

Cookie Settings Accept All

ACPT

NEW Meta fields can now be connected to core Gutenberg blocks natively using WordPress's Block Bindings

NEW Full Abilities API with 57 operations, exposing ACPT to AI agents and MCP-compatible tools

IMPROVEMENT Further reduced the number of database queries ACPT runs on every page load

IMPROVEMENT Completed the WCAG 2.1 AA accessibility roadmap across the admin interface

FIX [Security] Strengthened REST API authentication so it properly checks permissions

FIX [Security] Fixed a SQL injection issue in WooCommerce product-data field cleanup

FIX [Security] Fixed a privilege escalation issue that could let a public form overwrite an existing user, post, or term

FIX [Security] Hardened the plugin against PHP object injection across every affected code path

FIX [Security] Fixed rich-text fields allowing script tags through (stored XSS)
