Protection

Check Point Reference:	CPAI-2012-375
Date Published:	25 Nov 2012
Severity:	Medium
Last Updated:	Thursday 25 June, 2026
Source:	
Protection Provided by:	Security Gateway R75
Who is Vulnerable?	Sysax Multi Server 5.53
Vulnerability Description	A stack buffer overflow vulnerability has been reported in Sysax Multi Server SSH Service.
Vulnerability Details	The vulnerability is due to a boundary error when processing authentication requests. A remote attacker can exploit this issue by sending a specially crafted authentication request to the target. Successful exploitation would allow an attacker to inject and execute arbitrary code on the target.
