Apache Abdera

Abdera became a *Top Level Project* in **November 2008**, retired in **February 2017** and the move to the Attic was completed in April 2017.

Abdera was a project to build a functionally-complete, high-performance implementation of the IETF Atom Syndication Format (RFC 4287) and Atom Publishing Protocol (RFC 5023) specifications.

Read-only Resource	Link(s)
