Avada is constantly being updated with new features and adjustments. You can always view the most recent update information in the changelog in the changelog.txt file inside the Avada ZIP file. You can also view the full changelog below.

 The latest Avada version is: 7.15.2 (Released on April 13, 2026)

For mobile devices, opening the [changelog in a new tab](#) will be more convenient.

**IMPORTANT:**

-----  
-----

Please be sure to read the Important Update Notes before you update:

<https://avada.com/documentation/important-update-information/>

We are always proactive in preventing security issues, however nobody can assume they will never come up.

This is why we highly recommend to stay up to date with each new theme version and plugins.

Version 7.15.2 - April 13th, 2026

-----  
-----

**Security hardening**

- SECURITY: Fixed vulnerability of unauthenticated SQL injection via the product\_order parameter in Post Cards element
- SECURITY: Fixed Subscriber+ users being able to set up a stored XSS through the fallback option in dynamic data
- SECURITY: Fixed Subscriber+ users being able to access arbitrary file contents through the custom SVG option in Section Separator
- SECURITY: Enforced that non-admin users cannot store Code Block element in their user meta
- SECURITY: Enforced that protected (underscore-prefixed) post meta fields and WordPress actions cannot be used in dynamic data by non-admin users

**Main Changelog**

- NEW: Added options to rename Columns and all other elements
- NEW: Added options to allow Woo Category Filter element to filter categories on the shop page directly
- NEW: Already picked filters will now be kept when using the Woo Category Filter element in the change page mode
- NEW: Added breakpoint-specific options for margin, padding, and button span to the Button, Form Submit, and Stripe Button elements
- NEW: Added page options to allow setting robots follow and index meta tag
