WHAT IS BITCOIN?

What is Bitcoin?

Bitcoin is a digital currency that runs on an open, global payment network no single company or government controls. It was released in 2009 by the pseudonymous Satoshi Nakamoto. Only 21 million bitcoin will ever exist, which is why it is often described as digital scarcity, and anyone with an internet connection can send, receive and hold it without asking a bank for permission. For the full picture, read our guide to what Bitcoin is and how it works.
