BRICKS 2.4.4 IS NOW AVAILABLE. READ THE RELEASE NOTES →

CHANGELOG

Bricks 2.4.1

September 22, 2026

This release addresses template imports, CSS Sync, WooCommerce rendering, and permission checks, with three improvements to the builder and add-to-cart behavior.

Improvements

- WooCommerce now adds a temporary `.bricks-cart-success` class that resets with the success text.
- Theme Styles group indicators now reflect settings for the active breakpoint and pseudo state.
- Adding a rich text component property now focuses the Name field.

Notable fixes

- Remote templates once again import global classes that do not yet exist on the destination site.
- CSS Sync no longer copies descendant rules such as `%root% a` into the element's root style controls.
- Content after WooCommerce v2 Cart, Checkout, and My Account elements, or popup shortcodes, now renders correctly.
- Stripe payment options remain selectable after checkout refreshes when using WooCommerce Stripe Gateway with Checkout v2.
- Button preset colors and outline styles now retain their intended precedence in Theme Styles.
- Offloaded media remains available when local file copies are missing.
- Permission checks now cover revision and template operations, component and color palette changes, popup content access, and API query requests.

Full changelog
