CHANGELOG

# Bricks 2.4.4

October 28, 2026

Bricks 2.4.4 is a maintenance release with WooCommerce and Query Filters fixes, plus bug fixes across the Builder and frontend.

**It also includes several security fixes, so we recommend updating all sites.** These include fixes for CVE-2026-118803 and CVE-2026-118804.

WooCommerce fixes cover checkout field defaults and radio labels, shipping prices with the cart tax display setting, quick view popups in nested product loops, and My Account registration with Mailchimp. The AI screen now installs the MCP Adapter plugin from the WordPress plugin directory.

Query Filters now correctly index single-value ACF Post Object and Taxonomy fields that return objects. To apply the fix to existing filters, click “Regenerate filter index” under Bricks › Settings › General › Query filters after updating.

## Full changelog

| | |
|---|---|
| Builder: Do not auto-select a locked first class | IMPROVE |
| AI abilities: Explain missing postId in HTML/CSS conversion errors | IMPROVE |
| AI: Install MCP Adapter from the WordPress plugin directory | IMPROVE |
