BuddyBoss App Plugin - Version 3.2.2

Release date: Aug 21, 2026

Changes:

- Enhancement: Courses - Improved Courses support in the App, so admins can gate screens and tabs by course enrollment or completion and sell course access through In-App Purchases
- Bug: Core - Fixed cached App Page block content being shared across users on sites with a persistent object cache
- Bug: Core - Fixed Import and Export under App > Tools missing some settings, so custom icons, Tab bar links, and font scales now carry over correctly between sites
- Bug: Core - Fixed Upload History showing "No uploads found." for App customers by increasing the request timeout so existing uploads and their failure reasons load correctly
- Bug: IAP - Fixed orders for iOS Non-Renewing Subscription products expiring instantly instead of granting

access across the supported p and LMS integrations

- Bug: Security - Hardened database query handling across admin screens and REST endpoints with stricter validation of sorting and filtering parameters
- Bug: Security - Hardened file upload handling across the plugin with stricter content and extension validation, safe file naming, and secure storage locations
