OSIDB Bzimport  2025-02-24 14:33:37 UTC[Description](#)

This vulnerability affects all currently maintained versions of the quarkus-resteasy extension. Applications exposing REST endpoints using this extension are susceptible to attacks where an adversary can intentionally cause client timeouts, leading to memory exhaustion and application failure. The issue has been addressed in a recent fix, and users are advised to update their dependencies accordingly.
