OSIDB Bzimport  2025-11-24 13:00:59 UTC[Description](#)

An overflow problem was found in glib through an incorrect calculation of buffer size in the `g_escape_uri_string()` function. If the string to escape contains a very large number of unacceptable characters (which would need escaping), the calculation of the length of the escaped string could overflow, leading to a potential write off the end of the newly allocated string.
