

### Bug 2449006 (CVE-2026-4424) - CVE-2026-4424 libarchive: libarchive: Information disclosure via heap out-of-bounds read in RAR archive processing

**Keywords:** Security

**Reported:** 2026-03-19 12:25 UTC by OSIDB Bzimport

**Status:** NEW

**Modified:** 2026-04-20 03:55 UTC ([History](#))

**Alias:** CVE-2026-4424

**CC List:** 0 users

**Product:** Security Response

**Fixed In Version:**

**Component:** vulnerability

**Clone Of:**

**Version:** unspecified

**Environment:**

**Hardware:** All

**Last Closed:**

**OS:** Linux

**Embargoed:**

**Priority:** high

**Severity:** high

**Target Milestone:** ---

OSIDB Bzimport  2026-03-19 12:25:44 UTC[Description](#)

A Heap Out-of-Bounds Read vulnerability exists in the RAR archive processing logic of the libarchive library. The issue arises from improper validation of the LZSS sliding window size after transitions between compression methods (PPMd and LZSS). Due to a mismatch between the allocated buffer size and the expected dictionary size, the `copy_from_lzss_window()` function performs out-of-bounds memory reads. This allows a specially crafted RAR archive to leak heap memory through the `archive_read_data()` API before integrity checks (CRC) are enforced. The vulnerability can be exploited remotely without authentication or user interaction in systems that automatically process archives, leading to disclosure of sensitive information.
