

Bug 1388370 (CVE-2016-8615) - CVE-2016-8615 curl: Cookie injection for other servers

Keywords: Security

Status: CLOSED ERRATA

Alias: CVE-2016-8615

Product: Security Response

Component: vulnerability

Version: unspecified

Hardware: All

OS: Linux

Priority: medium

Severity: medium

Target Milestone: ---

Assignee: Red Hat Product Security

Andrej Nemeč	2016-10-25 08:09:27 UTC	Description
<p>If cookie state is written into a cookie jar file that is later read back and used for subsequent requests, a malicious HTTP server can inject new cookies for arbitrary domains into said cookie jar.</p> <p>The issue pertains to the function that loads cookies into memory, which reads the specified file into a fixed-size buffer in a line-by-line manner using the <code>fgets()</code> function. If an invocation of <code>fgets()</code> cannot read the whole line into the destination buffer due to it being too small, it truncates the output. This way, a very long cookie (name + value) sent by a malicious server would be stored in the file and subsequently that cookie could be read partially and crafted correctly, it could be treated as a different cookie for another server.</p> <p>External References:</p> <p>https://curl.haxx.se/docs/adv_20161102A.html</p>		

Andrej Nemeč	2016-10-25 08:48:09 UTC	Comment 1
<p>Created attachment 1213756 [details] Upstream patch</p>		

Adam Mariš	2016-11-02 08:25:37 UTC	Comment 2
<p>Created curl tracking bugs for this issue:</p> <p>Affects: fedora-all [bug-1390894]</p>		

Adam Mariš	2016-11-02 08:25:52 UTC	Comment 3
<p>Created mingw-curl tracking bugs for this issue:</p> <p>Affects: fedora-all [bug-1390895] Affects: epel-7 [bug-1390896]</p>
