Stable Channel Update for Desktop

Wednesday, April 15, 2026

The Stable channel has been updated to 147.0.7727.101/102 for Windows/Mac and 147.0.7727.101 for Linux, which will roll out over the coming days/weeks. A full list of changes in this build is available in the [Log](#)

Security Fixes and Rewards

Note: Access to bug details and links may be kept restricted until a majority of users are updated with a fix. We will also retain restrictions if the bug exists in a third party library that other projects similarly depend on, but haven't yet fixed.

This update includes [31](#) security fixes. Please see the [Chrome Security Page](#) for more information.

We would also like to thank all security researchers that worked with us during the development cycle to prevent security bugs from ever reaching the stable channel.

Many of our security bugs are detected using [AddressSanitizer](#), [MemorySanitizer](#), [UndefinedBehaviorSanitizer](#), [Control Flow Integrity](#), [libFuzzer](#), or [AFL](#).

Interested in switching release channels? Find out how [here](#). If you find a new issue, please let us know by [filing a bug](#). The [community help forum](#) is also a great place to reach out for help or learn about common issues.
