IMPORTANT:
-------------------------------------------------------
-------------------------------------
Please be sure to read the Important Update Notes
before you update:
https://classic.avada.com/documentation/important-
update-information/
We are always proactive in preventing security
issues, however nobody can assume they will never
come up.
This is why we highly recommend to stay up to date
with each new theme version and plugins.

-------------------------------------
Version 7.16.4 - October 26th, 2026
-------------------------------------------------------
-------------------------------------

Security hardening
- SECURITY: Fixed possible remote code execution
vulnerability in Avada Forms upload fields

Main Changelog
- NEW: Added border, box shadow, aspect ratio,
animation and four-sided margin options to the
YouTube, Vimeo and Video elements
- NEW: Added a Static choice to the Container and
Column aurora backgrounds, for a still mesh gradient
- IMPROVEMENT: The Critical CSS overview now shows
the creation dates in the site timezone
- FIXED: Element options set to Default ignoring the
Global Options value when showing / hiding dependent
options
- FIXED: System Status image conversion tool showing
the server support notice once all images are
converted, and not finishing when some images cannot
be converted
- FIXED: Fatal error when Avada 7.16.3 is used with
an Avada Builder version older than 3.16.3
- FIXED: Element option tabs not opening on
translated sites when a tab name contains special
```
