Vulnerability description

Allocation of Resources Without Limits or Throttling vulnerability in mtrudel bandit allows unauthenticated remote denial of service via memory exhaustion.

The fragment reassembly path in `'Elixir.Bandit.WebSocket.Connection':handle_frame/3` in `lib/bandit/websocket/connection.ex` appends every incoming `Continuation{fin: false}` frame's payload to a per-connection iolist with no cumulative size cap. The existing `max_frame_size` option only bounds individual frames; a peer that streams an unbounded number of continuation frames without ever setting `fin=1` grows BEAM heap linearly until the OS or a supervisor kills the process.

Because the accumulation happens before `WebSock.handle_in/2` is called, the application has no opportunity to interpose a size check. Phoenix Channels and LiveView both run over `WebSock` on Bandit, so a stock Phoenix application exposes this surface as soon as it accepts socket connections.

This issue affects bandit: from 0.5.0 before 1.11.0.

Affected

[pkg:hex/bandit](#)

Module	Source File	Routine	
Bandit.WebSocket.Connection	lib/bandit/websocket/connection.ex	Bandit.WebSocket.Connection.handle_frame/3	
Status	Type	Version	Changes / Fixed in
Affected	semver i	0.5.0	< 1.11.0

[pkg:github/mtrudel/bandit](#)

Module	Source File	Routine	
<code>Bandit.WebSocket.Connection</code>	lib/bandit/websocket/connection.ex	<code>Bandit.WebSocket.Connection.handle_frame/3</code>	
Status	Type	Version	Changes / Fixed in
Affected	git i	8909391f48	< 1.11.0

Configurations

The application must accept WebSocket connections. Applications that expose no WebSocket endpoints are not affected.
