CHANGELOG

Current Version: CWP7: **1.26**

CWP for EL9 **Latest**
CWP for CentOS 8/Almalinux 8 is the **recommended** version.
CWP7+ compatible with CentOS Stream, Alma Linux , Rocky Linux and Oracle Linux

CWP7

CentOS 7 / 8 / 9

Version 1.26 (released 26/10/2026)

Admin Panel

1. General Security and Hardening

- *Firewall and Rules*: ModSecurity OWASP CRS 3 now blocks traffic by default on new installations (enable button for existing ones), and the SSH manager was fixed to prioritize 00-cwp.conf on EL8/EL9.
- *Security Audit*: False alarms removed (PHP-FPM ports, /usr/lib64/gconv/gconv-modules.cache, RAM processes) and added detection for trojaned Apache modules (SEO malware with replaced mod_auth_form.so).
- *APIs and Passwords*:
    1. Authentication and strict validation added to external API (port 2304) and user API (port 2302).
    2. Secure recovery tokens and WordPress single sign-on links expiring after 2 minutes.
    3. Robust handling of passwords containing special characters (such as +) in MySQL.

- *Modules and Patches:* Comprehensive security review across all admin modules (prevention of SQL injection, XSS, Path Traversal, RCE, and CSRF). PHP Defender (Snuffleupagus) updated to v2 rules.

2. Server Migration (CWP to CWP for Large Servers)

- *Complete Migration*: Now transfers webmail data (Roundcube: contacts, calendars with recurring events and tasks), DKIM keys, FTP accounts, per-domain PHP-FPM settings, and suspended accounts.
- *Reliability*: Jobs run as independent systemd units to prevent interruptions during panel restarts. Includes automatic rsync retries, streamed database imports, and free space checks.
- *Automation*: Automatic opening/closing of firewall ports, detailed per-account reports, and differential synchronization option (Sync Again).

3. PHP Selector, PHP-FPM Selector, and PHP Switcher

- *Management and CLI:* New /scripts/cwp_php command to list versions, rebuild with panel options, and change domain handlers. Builds run independently with retries and memory control (temporary swap to avoid Killed signal).
- *Xdebug and SourceGuardian*: Updated and pinned Xdebug versions (v3.5.3 for PHP 8.2-8.5 and v2.9.0 for PHP 7.0-7.1) and fixed SourceGuardian loader for PHP 8.3/8.4/8.5.
- *Roundcube and phpMyAdmin*:
  1. Roundcube updated to LTS version 1.6.13 with automatic rollback.
  2. phpMyAdmin updated to version 5.2.3 while keeping CSRF protection and Single Sign-On active.

4. Backups

- *Destinations (S3, Samba/NAS, NFS)*: Fixed real destination display in notifications, root storage issues for Samba/NAS, and pre-mounting checks for NFS.
- *Downloads*: Backups can now be downloaded securely straight from the list (without copying to public_html).

5. Web Servers and System

★ **Version 1.12 (released 08/09/2026)** +

★ **Version 1.9 (released 21/08/2026)** +

★ **Version 1.2 (released 27/07/2026)** +

What's New?

Best Features

– New File Manager Multi Language [+ info] (https://www.youtube.com/watch?v=SxjeqhjKR4A)
– CWP-Secure Kernel [+ info] (https://www.youtube.com/watch?v=VhX7nv44etM)
– CWP for CentOS 8 [+ info] (http://wiki.centos-webpanel.com/the-future-of-centos-stream-with-cwp)
– Advanced IP manger for private / public IP's
– CWP User Panel: Dark Template [+ info] (https://www.youtube.com/watch?v=eBVnQjib2LI)
– CWP User Panel: Email Filters [+ info] (https://www.youtube.com/watch?v=lPoXs6dLS7o)
– CWP Admin: MailServer Stats [+ info] (https://www.youtube.com/watch?v=n-bzuhn-2n0)
– CWP SysStats SAR [+ info] (https://www.youtube.com/watch?v=CkcS-A-BwFU)
– CWP Security Center: Mod Security Reports + Malware Scan + PHP Defender [+ info] (https://www.youtube.com/watch?v=gJeAU7oe2nk)
– User Panel: Antivirus Scan / ClamAV [+ info] (https://www.youtube.com/watch?v=lBHMHl_hfCY&t=67s)
– CWP Admin: NodeJS Manager [+ info] (https://www.youtube.com/watch?v=amblG2CPMRM)
– Streaming Manager: Shoutcast + Icecast + AutoDJ

Security

Important security patches

By Ömer Faruk Öztürk: veomer.com (http://veomer.com)
By Octagon Networks: octagon.net (http://octagon.net)

Coming Soon

The Future of CWP

– CWP compatible with CentOS 9, AlmaLinux 9 and RockyLinux 9
– cPanel DNS Cluster Ingration
– Cluster CWP (Multi-Server Manager)
– Multi-Language and Multi-Template support for the CWP Admin panel
– Ipv6 module – full support of Ipv6 for mail server and webserver with IP management

CWP

CWP is a modern and advanced Linux control panel for web hosting providers and system admins.
It strives to be the best panel there is in the world, by focusing on the most advanced features and security.

Working Team:
Passionate people around the world.
