

## CWE-276: Incorrect Default Permissions

Weakness ID: 276

[Vulnerability Mapping](#): ALLOWED

Abstraction: Base

View customized information:

Conceptual

Operational

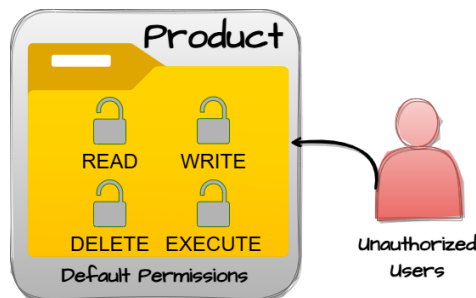

Mapping  
Friendly

Complete

Custom

### Description

During installation, installed file permissions are set to allow anyone to modify those files.

### Common Consequences

#### Impact

Read Application  
Data; Modify  
Application Data

#### Details

Scope: Confidentiality, Integrity

### Potential Mitigations

Phase(s)	Mitigation
Architecture and Design; Operation	The architecture needs to access and modification attributes for files to only those users who actually require those actions.
Architecture and Design	<p><b>Strategy: Separation of Privilege</b></p> <p>Compartmentalize the system to have "safe" areas where trust boundaries can be unambiguously drawn. Do not allow sensitive data to go outside of the trust boundary and always be careful when interfacing with a compartment outside of the safe area.</p> <p>Ensure that appropriate compartmentalization is built into the system design, and the compartmentalization allows for and reinforces privilege separation functionality. Architects and designers should rely on the principle of least privilege to decide the appropriate time to use privileges and the time to drop privileges.</p>

### Relationships

#### Relevant to the view "Research Concepts" (View-1000)

Nature	Type	ID	Name
ChildOf		<a href="#">732</a>	Incorrect Permission Assignment for Critical Resource

#### Relevant to the view "Software Development" (View-699)

Nature	Type	ID	Name
MemberOf		<a href="#">275</a>	Permission Issues

#### Relevant to the view "Weaknesses for Simplified Mapping of Published Vulnerabilities" (View-1003)

Nature	Type	ID	Name
ChildOf		<a href="#">732</a>	Incorrect Permission Assignment for Critical Resource

▼ **Relevant to the view "Architectural Concepts" (View-1008)**

Nature	Type	ID	Name
MemberOf	<b>C</b>	<a href="#">1011</a>	Authorize Actors

▼ **Relevant to the view "Hardware Design" (View-1194)**

Nature	Type	ID	Name
MemberOf	<b>C</b>	<a href="#">1198</a>	Privilege Separation and Access Control Issues

▼ **Modes Of Introduction**

Phase	Note
Architecture and Design	
Implementation	
Installation	
Operation	

▼ **Applicable Platforms**

Category	Description
Languages	Class: Not Language-Specific ( <i>Undetermined Prevalence</i> )
Technologies	Class: Not Technology-Specific ( <i>Undetermined Prevalence</i> ) Class: ICS/OT ( <i>Undetermined Prevalence</i> )

▼ **Likelihood Of Exploit**

Medium

▼ **Selected Observed Examples**

Note: this is a curated list of examples for users to understand the variety of ways in which this weakness can be introduced. It is not a complete list of all CVEs that are related to this CWE entry.

Reference	Description
<a href="#">CVE-2005-1941</a>	Executables installed world-writable.
<a href="#">CVE-2002-1713</a>	Home directories installed world-readable.
<a href="#">CVE-2001-1550</a>	World-writable log files allow information loss; world-readable file has cleartext passwords.
<a href="#">CVE-2002-1711</a>	World-readable directory.
<a href="#">CVE-2002-1844</a>	Windows product uses insecure permissions when installing on Solaris (genesis: port error).
<a href="#">CVE-2001-0497</a>	Insecure permissions for a shared secret key file. Overlaps cryptographic problem.
<a href="#">CVE-1999-0426</a>	Default permissions of a device allow IP spoofing.

▼ **Weakness Ordinalities**

Ordinality	Description
Primary	(where the weakness exists independent of other weaknesses)

▼ **Detection Methods**

Method	Details
<b>Automated Static Analysis - Binary or Bytecode</b>	<p>According to SOAR <a href="#">[REF-1479]</a>, the following detection techniques may be useful:</p> <p>Cost effective for partial coverage:</p> <ul style="list-style-type: none"> <li>Inter-application Flow Analysis</li> </ul> <p><b>Effectiveness: SOAR Partial</b></p>

<b>Manual Static Analysis - Binary or Bytecode</b>	<p>According to SOAR <a href="#">[REF-1479]</a>, the following detection techniques may be useful:</p> <p>Cost effective for partial coverage:</p> <ul style="list-style-type: none"> <li>• Binary / Bytecode disassembler - then use manual analysis for vulnerabilities &amp; anomalies</li> </ul> <p><b>Effectiveness: SOAR Partial</b></p>
<b>Dynamic Analysis with Automated Results Interpretation</b>	<p>According to SOAR <a href="#">[REF-1479]</a>, the following detection techniques may be useful:</p> <p>Cost effective for partial coverage:</p> <ul style="list-style-type: none"> <li>• Host-based Vulnerability Scanners - Examine configuration for flaws, verifying that audit mechanisms work, ensure host configuration meets certain predefined criteria</li> <li>• Web Application Scanner</li> <li>• Web Services Scanner</li> <li>• Database Scanners</li> </ul> <p><b>Effectiveness: SOAR Partial</b></p>
<b>Dynamic Analysis with Manual Results Interpretation</b>	<p>According to SOAR <a href="#">[REF-1479]</a>, the following detection techniques may be useful:</p> <p>Highly cost effective:</p> <ul style="list-style-type: none"> <li>• Host Application Interface Scanner</li> </ul> <p>Cost effective for partial coverage:</p> <ul style="list-style-type: none"> <li>• Fuzz Tester</li> <li>• Framework-based Fuzzer</li> <li>• Automated Monitored Execution</li> <li>• Forced Path Execution</li> </ul> <p><b>Effectiveness: High</b></p>
<b>Manual Static Analysis - Source Code</b>	<p>According to SOAR <a href="#">[REF-1479]</a>, the following detection techniques may be useful:</p> <p>Highly cost effective:</p> <ul style="list-style-type: none"> <li>• Manual Source Code Review (not inspections)</li> </ul> <p>Cost effective for partial coverage:</p> <ul style="list-style-type: none"> <li>• Focused Manual Spotcheck - Focused manual analysis of source</li> </ul> <p><b>Effectiveness: High</b></p>
<b>Automated Static Analysis - Source Code</b>	<p>According to SOAR <a href="#">[REF-1479]</a>, the following detection techniques may be useful:</p> <p>Cost effective for partial coverage:</p> <ul style="list-style-type: none"> <li>• Context-configured Source Code Weakness Analyzer</li> </ul> <p><b>Effectiveness: SOAR Partial</b></p>
<b>Automated Static Analysis</b>	<p>According to SOAR <a href="#">[REF-1479]</a>, the following detection techniques may be useful:</p> <p>Cost effective for partial coverage:</p> <ul style="list-style-type: none"> <li>• Configuration Checker</li> </ul> <p><b>Effectiveness: SOAR Partial</b></p>
<b>Architecture or Design Review</b>	<p>According to SOAR <a href="#">[REF-1479]</a>, the following detection techniques may be useful:</p> <p>Highly cost effective:</p> <ul style="list-style-type: none"> <li>• Formal Methods / Correct-By-Construction</li> </ul>

Cost effective for partial coverage:

- Inspection (IEEE 1028 standard) (can apply to requirements, design, source code, etc.)

**Effectiveness: High**

#### ▼ Vulnerability Mapping Notes

<b>Usage</b>	<b>ALLOWED</b> (this CWE ID may be used to map to real-world vulnerabilities)
<b>Reason</b>	Acceptable-Use
<b>Rationale</b>	This CWE entry is at the Base level of abstraction, which is a preferred level of abstraction for mapping to the root causes of vulnerabilities.
<b>Comments</b>	Carefully read both the name and description to ensure that this mapping is an appropriate fit. Do not try to 'force' a mapping to a lower-level Base/Variant simply to comply with this preferred level of abstraction.

#### ▼ Notes

##### Maintenance

As of CWE 4.19, this entry is being considered for deprecation or significant revision. Its name and description are inconsistent. The name is more general, and the description is more specific. The description emphasizes the installation phase only; mentions only files; and emphasizes modification of those files. The name applies to any type of resource, does not mention the specific permissions, and could be relevant to any SDLC phase.

#### ▼ Taxonomy Mappings

Mapped Taxonomy Name	Node ID	Fit	Mapped Node Name
PLOVER			Insecure Default Permissions
CERT C Secure Coding	FIO06-C		Create files with appropriate access permissions
The CERT Oracle Secure Coding Standard for Java (2011)	FIO01-J		Create files with appropriate access permission
ISA/IEC 62443	Part 2-4		Req SP.03.08
ISA/IEC 62443	Part 4-2		Req CR 2.1
