Enterprise Level Cheminformatics

- Daylight provides [software](#) which delivers state-of-the art chemical information processing to individual users and enterprise systems. We invented and support the [SMILES™](#), [SMARTS®](#), and [SMIRKS®](#) chemical languages.
- Daylight [Web Services](#) facilitate the rapid development and deployment of discovery-oriented web applications, offering flexibility and ease of access to our chemistry tools. Web Services [Demo](#) available allowing network access to chemistry-oriented processes.
- [DayCart®](#), Daylight's chemistry cartridge, delivers chemical intelligence across corporate systems totally within the industry standard RDBS (Oracle and [PostgreSQL](#)).
- The [Daylight Toolkit](#) enables companies to build applications to add a broad range of cheminformatics capabilities to environments of any scale.
- A broad range of [content](#) is available in Daylight format and is available directly from Daylight or from third parties
- Daylight [partners](#) with other software vendors and integrators to offer complete solutions for life science applications.

News

DayCart®:

Now fully supports

ClopP:

Significant version updates

Release Highlights v4.95

[DayCart®](#) now available for [PostgreSQL](#) with fully functional interface and rapid row-at-a-time searching

Performance and reliability improvements using fingerprints augmented with scaffolds in [DayCart®](#)

[ClopP](#) updated with database (v28) and algorithm (v5.4)
