SECURITY RESEARCH

Vulnerability research by our security team.

Our researchers discover 0-day vulnerabilities in the products of the world's largest software and hardware vendors, SonicWall, VMware, Sophos, Novell, Apple, Mitel, OPNsense, WatchGuard, Kyocera, validated by the Zero Day Initiative and published in the global CVE registry.

Beyond client audits, our research team hunts for previously unknown (0-day) vulnerabilities in the products of the world's largest software and hardware vendors, then reports them under coordinated disclosure.

MITEL

Published CVE

Mitel MiVoice Office 400: backup restoration arbitrary file write leading to root code execution

DGI-SWISS-00033 · CVE-2026-104805

2026-10-05

8.5 CVSS 4.0 · High

The backup restoration mechanism of Mitel MiVoice Office 400 fails to validate the paths, file types, integrity and authenticity of files contained in TGZ archives. An attacker with access to the backup repository can introduce malicious files that are written to the system during restoration, up to arbitrary...

Published CVE

Mitel MiVoice Office 400: path traversal: system file read via View Logs

DGI-SWISS-00025 · CVE-2026-104706 2026-10-05

8.4 CVSS 4.0 · High

A path traversal in the Mitel MiVoice Office 400 administration portal (https://<ip>:8443, Administration → View Logs menu) allows reading sensitive system files outside the intended directory.

Published CVE

Mitel MiVoice Office 400: shared object hijacking leading to arbitrary code execution

DGI-SWISS-00027 · CVE-2026-104809 2026-10-05

8.4 CVSS 4.0 · High

Mitel MiVoice Office 400 loads shared libraries (.so) using predictable names and without integrity verification. An attacker can make the system load an attacker-controlled .so file instead of the legitimate module; the code runs with the process privileges and leads to full compromise of the virtual machine.

MITEL

Published CVE

Mitel MiVoice Office 400: file browser path traversal (deletion of system files)

DGI-SWISS-00028 · CVE-2026-104810 2026-10-05

8.4 CVSS 4.0 · High

The File Management feature of the Mitel MiVoice Office 400 web portal does not properly validate paths: an authenticated user can traverse directories and delete critical application or system files, causing a denial of service.

Details ▾

MITEL

Published CVE

Mitel MiVoice Office 400: code execution via WAV file upload (music on hold)

DGI-SWISS-00029 · CVE-2026-104811 2026-10-05

8.4 CVSS 4.0 · High

The Music on Hold feature of Mitel MiVoice Office 400 improperly validates uploaded files: an attacker can upload a malicious shared object (.so) disguised as a WAV audio file, leading to arbitrary code execution and system compromise.

Published CVE

Mitel MiVoice Office 400: system logs path traversal (information disclosure)

DGI-SWISS-00032 · CVE-2026-104806 2026-10-05

5.5 CVSS 4.0 · Medium

The System Logs feature of the Mitel MiVoice Office 400 web management portal (TCP 443) fails to properly validate file paths, allowing an attacker to read files outside the intended directory.

MITEL

Published CVE

Mitel MiVoice Office 400: stored Cross-Site Scripting via the Domains description field

DGI-SWISS-00030 · CVE-2026-104807 2026-10-05

1.9 CVSS 4.0 · Low

An authenticated attacker can inject JavaScript into the "Description" field under Configuration → Domains in the Mitel MiVoice Office 400 web portal (TCP 443). The input is not sanitised: the persistent script runs for other users (page manipulation, content injection, phishing).

MITEL

Published CVE

Mitel MiVoice Office 400: stored Cross-Site Scripting via the "Microsoft Exchange mailbox" field

DGI-SWISS-00031 · CVE-2026-104808 2026-10-05

1.9 CVSS 4.0 · Low

An authenticated attacker can inject JavaScript into the "Microsoft Exchange mailbox" field of the Mitel MiVoice Office 400 user configuration. The stored script runs whenever the user properties are accessed and can cause a denial of service of the interface.

DISCLOSURE PARTNER

We work with the NCSC, Switzerland's federal CVE Numbering Authority

Our vulnerabilities are registered, reviewed and published in the global CVE registry in coordination with the **Federal Department of Defence, Civil Protection and Sport DDPS, National Cyber Security Centre NCSC, Vulnerability Management** (Federal Office for Cybersecurity, Bern), the CVE Numbering Authority (CNA) of the Swiss Confederation. The NCSC assigns CVE identifiers to our findings and coordinates with the affected vendors. Eight Mitel MiVoice Office 400 CVEs were published this way on 5 October 2026.

ADVISORIES ZDI-26-530 · 531 · 532 · 770

0-DAY VALIDATION PARTNER

Our 0-days are validated by the Zero Day Initiative (ZDI)

Our SonicWall 0-day findings are submitted to **Trend Micro's Zero Day Initiative**, the world's largest vendor-agnostic bug bounty program. ZDI reproduces and validates each flaw, acquires it from the researcher, coordinates disclosure with the vendor and publishes its own advisory: ZDI-26-530, ZDI-26-531, ZDI-26-532 and ZDI-26-770 (CVE-2026-66148 to 66150) credit Brian Mariani of DigitalCanion SA, and ZDI-CAN-28924 was published as CVE-2026-102257 (SonicWall SMA1000, advisory SNWLID-2026-0017 and ZDI advisory ZDI-26-770).

VENDOR RECOGNITION

DigitalCanion in the SonicWall PSIRT Hall of Fame

SonicWall's **PSIRT Hall of Fame** recognises researchers who report vulnerabilities to SonicWall responsibly. DigitalCanion SA is listed, through its researcher Brian Mariani, for the flaws found in Email Security, GMS, SSL VPN and SMA1000: command injection, stored Cross-Site Scripting, path traversal and denial of service, fixed in advisories SNWLID-2025-0018, SNWLID-2026-0002, 0011, 0012 and 0017.

View the SonicWall Hall of Fame → **SonicWall PSIRT advisories →**

IN THE PRESS

Our findings in the press and CVE databases

The vulnerabilities we disclose are published in the global CVE registry, credited to our team (Brian Mariani, DigitalCanion SA) and covered by specialised cybersecurity media.

THE HACKER NEWS

SECURITYWEEK

SonicWall Patches CVSS 10.0 Pre-Authentication SSRF Flaw in SMA1000 Appliances

Covers advisory SNWLID-2026-0017 and credits Brian Mariani of DigitalCanion SA for CVE-2026-102257 (Zip Slip, via the Zero Day Initiative) and CVE-2026-102258 (stored Cross-Site Scripting). 7 October 2026.
