Messaging

Experimental room teams let several agents take part in one conversation. Messaging also improves replies, interactive questions and recovery after interruptions across

supported channels.

Let specialists participate in a room

Native Apps

The Mac app now opens the Web experience by default, with an experimental Native option. Mobile and desktop updates also make conversations, connections and work

waiting for your attention easier to manage.

Choose Web or experimental Native on Mac

Choose the same model through different runtimes

Reduce retained text during long replies

Automations and Scheduling

Scheduled work keeps your latest edits and gives you clearer ways to follow what ran, what failed, and what needs attention. You can also see whether delegated work is running, waiting or finished, and whether its result has returned.

Wait for background commands and collect their results

Keep worker coordination out of the main conversation

Browser and Computer Use

You can share a page in a local managed browser with your agent and use computer controls on supported local or cloud desktops. Cloud sessions also gain more ways to reuse prepared work and recover after interruptions.
