Self-hosted Retool Edge release 3.88

Release notes for the Self-hosted Retool 3.88 edge release.

SELF-HOSTED ENTERPRISE

Releases on the Edge channel occur weekly. Each release occurs one week after the equivalent release for cloud-hosted Retool.

Edge releases are available for organizations that want the latest features or to use private beta functionality. Retool recommends most organizations use Stable releases unless you have a specific need for Edge releases and can keep your deployment up-to-date.

Retool supports only the most recent release on the Edge channel. As Edge releases are weekly, bug fixes and improvements are included in the next release. All previous releases are then considered deprecated.

Self-hosted Retool 3.88

ADDED	Added support for reading and writing NFC tags. [#49324]
ADDED	Added testing support for writing `semgrep` rules. [#49318]
ADDED	Added functionality to support mirroring actions affecting the app template. [#49077]
ADDED	Added support for rendering children of a global split pane across all pages. [#49407]
ADDED	Added new tabs to the Cypress testing editor. [#49119]
ADDED	Added split pane to the global component tree. [#49165]
ADDED	Added support for opening the SSO test connection page in a new tab. [#49362]
ADDED	Added support to keep session-specific state like `current_user` and `viewport` during test generation. [#49189]
ADDED	Added support for copying app templates to mirror after slice loads. [#49075]
ADDED	Added new UI for app testing that includes expanded value code editors for query mocks and preconditions. [#49026]
ADDED	Added safeguards for Retool Database archiving. [#47982]
FIXED	Fixed an issue preventing users from uploading custom component revisions without essential files. [#49373]
51 changes	COLLAPSE ALL EXPORT CSV

TYPE ↑	DESCRIPTION ↕
FIXED	Fixed issues in the theme editor. [#49347]
FIXED	Fixed an issue with renaming the root screen in multipage apps. [#49441]
FIXED	Fixed default MongoDB version to the latest. [#49450]
FIXED	Fixed an issue where the first item in the Navigation component's `sub-menu wouldn't` trigger the click event handler. [#49427]
FIXED	Fixed an issue where the swatch value in the Color Input component would not update correctly in multiselection scenarios. [#49031]
FIXED	Fixed the issue where the global frame button was disabled if a page-scoped split frame existed. [#49436]
FIXED	Fixed tooltip cursor trigger to ensure clickability and resolved a console warning related to the editing status bar. [#49426]
FIXED	Fixed an issue preventing widgets from being moved into frames with different page scopes in mobile and desktop layouts. [#49304]
FIXED	Fixed spacing issue with the clear button in the Select component. [#49413]
FIXED	Fixed an issue with chunk loading in Safari versions earlier than 16.4. [#49355]
FIXED	Fixed an issue where a mixed property caused tokens list to incorrectly show selection. [#49205]
FIXED	Fixed an issue where `taskURL` and `taskID` were not referencable from `onSuccess` event handler of user tasks. [#49385]
FIXED	Fixed an SVG XSS vulnerability by adding a CSP. [#49381]

51 changes

TYPE ↑	DESCRIPTION ↕
FIXED	Fixed an issue where the query editor browser displayed queries from other pages. [#49123]
FIXED	Fixed issues with executions when a user task or wait block follows a skipped branch. [#49342]
FIXED	Fixed an issue with the `containerize` action`s padding and margin. [#49341]
FIXED	Fixed an issue where renaming legacy loop blocks caused data corruption. [#49333]
FIXED	Fixed an issue to prevent users from adding a global split pane when the split pane option is disabled. [#49309]
FIXED	Fixed an issue where blocks named `params` were not working. [#49269]
FIXED	Fixed an issue where workflow folder permission updates were not accurately reflected in the UI. [#49287]
FIXED	Fixed an issue where selecting all rows in a table with server-side pagination added a null value to `selectedRows`. [#49186]
FIXED	Fixed error and warning messages to inform users that `x-workflow-api-key` is also a valid key. [#49264]
FIXED	Fixed an issue with the Navigation component where captions caused layout problems. [#49213]
FIXED	Fixed issues with the Text Area component. [#49108]
FIXED	Fixed logging for parsing errors. [#49256]
FIXED	Fixed an issue where dynamic input fields remained visible in the typography editor when mapping dynamic values to tokens. [#49130]
51 changes	

TYPE ↑	DESCRIPTION ↕
FIXED	Fixed an issue where the custom collection view was broken during fast navigation. [#49203]
FIXED	Fixed scope issues for global frames in multipage setups, resolving problems with dragging components onto frames. [#49120]
FIXED	Fixed an issue with WidgetGrid where custom components did not re-render dynamically when network requests were completed. [#49178]
FIXED	Fixed an issue with WidgetGrid and multiselection. [#49180]
FIXED	Fixed an issue with WidgetGrid where modal text was still visible when the modal was hidden. [#49215]
FIXED	Fixed events editor popover closing immediately after opening when creating a new event handler. [#49137]
IMPROVED	Improved runtime performance of SVGs. [#49360]
IMPROVED	Improved functions for converting the app template to and from a non-immutable format. [#49078]
IMPROVED	Improved the JSON format for **SSO test connection** results. [#49383]
IMPROVED	Improved the invite modal to auto-close upon successful action. [#49359]
IMPROVED	Improved the SSO test connection process by using cookies instead of URL parameters to handle the `testConnection` flag. [#49285]
CHANGED	Changed to disallow release creation if not on `toolscript`. [#49456]
