

WP Squared Changelog

On this page ▾

2026-04

136.1.7

released on 2026-04-28

WP2 related changes

- Implemented Case(s):
 - WPX-10216: Display an update button on the active theme card when a theme update is available.
 - WPX-10242: Allow WP2 task-queue and backup binaries to call admin modules.

cPanel related changes

- Fixed Case(s):
 - CPANEL-52908: Fixed issue with login authentication.

136.1.6

released on 2026-04-13

WP2 related changes

- Fixed Case(s):
 - WPX-10433: Update wp-toolkit-cpanel to 6.10.0-10331.

cPanel related changes

- Fixed Case(s):
 - CPANEL-46159: Fix race condition that allowed a truncated Apache httpd.conf to be published during concurrent AutoSSL and userdata updates, taking all virtual hosts offline. Add pre-publication structural validation and structured log labels to identify which rebuild layer failed.
 - CPANEL-49988: Require the force DNS flag when root creates an account using a domain that is a subdomain of another user's domain.
 - CPANEL-51692: Prevent SSL certificates which advertise coverage for names which contain spaces from being expressed in the Dovecot configuration, something which breaks the service.
 - CPANEL-51923: Reduce AutoSSL notification spam by sending a single digest email when multiple domains fail certificate renewal, instead of one email per domain.

136.1.5

released on 2026-04-08

WP2 related changes

- Fixed Case(s):
 - WPX-6345: Automatically reinstall the imagick PHP extension after ImageMagick library updates to prevent version-mismatch errors.
 - WPX-7760: The get_user_email_forward_destination and set_user_email_forward_destination WHM API functions no longer require the Receive Mail role.
 - WPX-8471: Fix error handling for WordPress staging site password protection to correctly capture and report errors.
 - WPX-8990: Prevent AccelerateWP plugins from being briefly installed on WordPress staging sites during creation.
 - WPX-9299: Fix WordPress installation failing to redirect to Extendify when a concurrent WPTK task caused the install task to be deferred.
 - WPX-9927: Fix some AutoSSL DCV failures for preview domains by allowing ACME HTTP challenges to bypass the HTTPS redirect.
 - WPX-10016: Fix the WP Squared Advanced tab loading indefinitely when SSL or DNS data requests encounter errors.
 - WPX-10049: WordPress sites using Extendify onboarding now automatically clear the Nginx cache after launch completes, ensuring visitors see the

updated site immediately.

- WPX-10183: Fix preview domain setup hanging indefinitely when the readiness check timeout fires during an in-flight HTTP request.
- Implemented Case(s):
 - WPX-5166: Add ability to import an existing WordPress website into WP Squared using source site credentials.
 - WPX-5968: The system now enables Shell Access by default for new hosting packages and for the default package on fresh servers.
 - WPX-6741: Improved performance of AccelerateWP feature status checks by filtering results per domain when the installed accelerate-wp version supports it.
 - WPX-7961: Theme and plugin images now display a grey pulsing placeholder during loading and gracefully fall back to a default image on error, eliminating layout shift in the WP² interface.
 - WPX-9887: `verify_wptk_userdata` now auto-registers domains missing from WPTK during repair and preserves `wptkid` entries by default.
 - WPX-10187: Display notification indicator on Plugins and Themes tabs when updates are available or recommended plugins are missing.
 - WPX-10238: Prevent creation of domains that are subdomains of auto-domains (e.g., `cprapid.com`, `wp2.host`).
 - WPX-10321: Added Romanian and Indonesian language support for WordPress Squared.
 - WPX-10352: Enable MAX Cache by default on new and existing WP Squared servers to improve WordPress performance.
 - WPX-10358: Add ability to toggle the Import My Website feature via WHM Feature Manager and display a Beta badge on the import card.
 - WPX-10364: Update `wp-toolkit-cpanel` to 6.10.0-10297.
 - WPX-10205, WPX-10367: Add ability to generate CSR certificates, install custom SSL certificates, and reset to AutoSSL-managed certificates in the WP Squared SSL management interface. Fix the Advanced tab loading indefinitely when the SSL certificate SAN list does not include the website domain.

cPanel related changes

- Fixed Case(s):
 - CPANEL-43136: Fix Security Advisor to properly detect Imunify360, ImunifyAV, and ImunifyAV+ when market provider is disabled.
 - CPANEL-44000: `scripts/cpdig` now will print DNS errors if encountered.
 - CPANEL-45401: Remove remaining ICQ/OSCAR related code from the product.

- CPANEL-46970: Improved error messaging for package max_email_per_hour validation.
- CPANEL-48069: Automatically configure PHP error logging to ~/logs/php.error.log for all newly created domains.
- CPANEL-48069: Allow PHP error logging directives (error_log, log_errors, error_log_mode) to be configured in MultiPHP INI Editor Basic Mode.
- CPANEL-50301: Fix bug in Cpanel::RPM::Versions::Pkgr where children of the locker PID would destroy the lockfile out from under a parent on exit.
- CPANEL-50532: Updated Trademarks pages to reflect WebPros International, L.L.C. ownership with improved layout and current third-party trademark attributions.
- CPANEL-50845: Fix account backup failure when userdata directory contains subdirectories.
- CPANEL-51513: Respect httpd_deferred_restart_time during bulk account removal to avoid redundant Apache PHP-FPM restarts.
- CPANEL-51627: Re-add support for Dovecot to use custom Diffie-Hellman parameters file.
- CPANEL-51680: Fix false-alarm SSL expiry warnings for AutoSSL-managed domains.
- CPANEL-51680: Use less alarming warning text for SSL certificates that are expiring soon but will be auto-renewed.
- CPANEL-51788: Fix chkservd not reading mail service logs, which could cause Eximstats and Track Delivery to stop updating.
- CPANEL-51921: Upgrade Compress::Raw::Zlib to address CVE-2026-3381.
- CPANEL-52006: Update PHP to 8.4.19.
- CPANEL-52028: Show Hostname, Operating System, cPanel Version, and Load Averages in the WHM home Statistics card on mobile-sized viewports.
- CPANEL-52164: Fix uninitialized-value warnings in Cpanel::CachedDataStore when the datastore file disappears between stat calls during disk cache validation.
- CPANEL-52170: Cancel stale CI runs when new commits are pushed to a pull request instead of running both in parallel.
- CPANEL-52182: Bump rpm.versions for update to cpanel-geoipfree-data.
- CPANEL-52224: CPAN updates, addressing CVE-2026-4177, CVE-2006-10002, CVE-2006-10003.
- CPANEL-52244: Improve WHM frontend build performance by filtering minification targets to git-tracked files only.
- CPANEL-52327: Fix Apache rebuild warnings and repeated survey prompts caused by root's scoped userdata directory.
- Implemented Case(s):

- CPANEL-51959: Fix styling of the Cancel button in the outdated PHP version confirmation dialog on the WHM MultiPHP Manager page.
- CPANEL-52298: Update SVCB API Specs for Existing Go Links.

2026-03

136.1.4

released on 2026-03-20

WP2 related changes

- Fixed Case(s):
 - WPX-7212: Fix search engine indexing not being disabled for accounts created with temporary domains.
 - WPX-7724: Throttle AutoSSL failure notifications to at most once per 24 hours per vhost, notification type, and recipient.
 - WPX-8452: Fix Mixpanel debug logging appearing in browser console when debugui is not enabled.
 - WPX-8852: Allow "@" as a shortcut for the root domain in the zone editor, matching standard DNS zone file conventions.
 - WPX-9384: Fix typo in UAPI Variables get_user_information field name from 'maximum_w2_sebsites' to 'maximum_w2_websites'.
 - WPX-9860: Fix double HTML-encoding of the Autoinstall Set tooltip in the WP Squared package extension.
 - WPX-9862: AutoSSL now emits a clear error when the configured provider module does not exist on the system.
 - WPX-9924: Always create /home/wp-backups during WP2 installation to prevent cagfsctl sanity-check failures on fresh deployments.
 - WPX-9949: Add WP::is_nginx_caching_enabled UAPI endpoint.
 - WPX-10000: Added the Stats::get_stats_daily UAPI method to retrieve daily AwStats data for a domain.
- Implemented Case(s):
 - WPX-9311: Allow concurrent WordPress clone and rename operations across different instances.
 - WPX-9857: Add clear nginx cache action to the website lister when nginx caching is enabled.
 - WPX-9935: Automatically install Imunify360 on WP Squared servers where it was missing due to an installer failure.

- WPX-10104: Redesign disk usage display in websites list with a structured badge and color-coded progress bar.

cPanel related changes

- Fixed Case(s):
 - CPANEL-46546: Fix Ticket Assist firewall detection when Imunify360 creates /etc/csf without installing the CSF binary.
 - CPANEL-47555: MySQL and MariaDB upgrades now detect and automatically remove version locks when proceeding with the upgrade, preventing database service from being left in a non-functional state.
 - CPANEL-49464: Remove custom Net::SSLLeay fork in favor of upstream module.
 - CPANEL-50811: Add OpenAPI documentation for deprecated FeatureLists API methods.
 - CPANEL-50957: Rename “Process Memory Limit: config” in Mailserver Config to “Process Memory Limit for Other Services”, and apply the setting to all internal Dovecot services not otherwise covered by another setting.
 - CPANEL-51488: Make EOL PHP/Hardened PHP clearer in EA4 UI output.
 - CPANEL-51568: Add ARC signing to SRS forwarded SMTP messages.
 - CPANEL-51576: Add WHM API function to report the count of domains using end-of-life PHP versions.
 - CPANEL-51581: Update cpanel-php84 to 8.4.18.
 - CPANEL-51641: Display PHP outdated version warning in WHM List Accounts page when sites use end-of-life PHP versions.
 - CPANEL-51678: Fix FileManager upload popup incorrectly tracking anonymous Mixpanel events regardless of user analytics consent settings.
 - CPANEL-51917: Upgrade Net::CIDR to 0.27 to address CVE-2021-4456.
 - CPANEL-51919: Upgrade Crypt::URandom for CVE-2026-2474.
 - CPANEL-51921: Upgrade Compress::Raw::Zlib to address CVE-2026-3381.
 - DUCKS-4995: Improve required extension handling and warning messages in WHM package forms.
- Implemented Case(s):
 - CPANEL-47921: Added a WHM interface for managing web server log retention settings across cPanel accounts.
 - CPANEL-47921: Added WHM API for managing web server log retention settings across accounts.
 - CPANEL-47921: Added a new tweak setting to control web server log archive retention and a script to perform automated cleanup.
 - CPANEL-48364: Allow third-party backup tools to restore domains on DNS-clustered servers via the force parameter.

- CPANEL-50070: Remove redundant server info rows from the WHM home Statistics sidebar and hide the sidebar when it has no content.
- CPANEL-51639: Change Security Advisor to suggest installing cPanel CSF using cleaner methods.

2026-02

136.1.3

released on 2026-02-25

WP2 related changes

- Fixed Case(s):
 - WPX-7389: Update Modify Domain modal text to match design specifications.
 - WPX-9563, WPX-9553: Update Angular packages to 20.3.15 to address CVE-2025-66035 and CVE-2025-66412 security vulnerabilities.
 - WPX-9823: Improve form validation in the Reset Password and CDN setup flows with better email validation and error messages.
 - WPX-9885: Fix duplicate notification IDs causing UI test failures.
 - WPX-9954: Fix AWStats statistics display for dates that cross year boundaries.
- Implemented Case(s):
 - WPX-9033: Queue Object Cache feature reinstalls so login links remain reliable.
 - WPX-9842: Implement Italian-language translations.
 - WPX-9844: Implement Dutch-language translations.
 - WPX-9847: Implement Polish-language translations.
 - WPX-9853: Allow administrators to disable preview links by default.

cPanel related changes

- Fixed Case(s):
 - CPANEL-43386: Transfer tool now automatically updates PHP handlers in .htaccess files to match the destination server's available handlers, preventing PHP configuration issues after transfers.
 - CPANEL-46584: Harden MySQL upgrade process by setting locale to C defensively.
 - CPANEL-47033: Fix MariaDB 10.11+ startup error caused by attempting to load the non-existent auth_socket.so plugin.

- CPANEL-50066: Label outdated and secured PHP versions in MultiPHP Manager and INI Editor.
- CPANEL-50385: Fix 404 errors when granting support access for forked tickets where SSH keys already exist from parent tickets.
- CPANEL-50673: Update ssl_minimum_protocol list for Dovecot 2.4.
- CPANEL-50935: The system now applies the Update DNS Zone setting when you use the Apply to Other Selected Accounts button in the Transfer Tool.
- CPANEL-50967: Improve Jodit to support browsing subdirectories and use relative links when inserting images via the filebrowser.
- CPANEL-51346: Fixed Whostmgr::Quota::setusersquota() condition that confused 0 with unlimited.
- Implemented Case(s):
 - CPANEL-50441: Updated Security Advisor for CSF.
 - CPANEL-50679: Remove libmariadb autofix logic from Sysup.
 - CPANEL-50759: Fix EasyApache4 wizard to correctly auto-select PHP extensions when installing ALT PHP versions from CloudLinux.

136.1.2

released on 2026-02-10

WP2 related changes

- Fixed Case(s):
 - WPX-7146,WPX-7147: Block cloning to redirect or owned domains.
 - WPX-9325: Skip the MailMan install task when disabled.
 - WPX-9391: Fix default for Max manual backups per Website in packages.
 - WPX-9692: Clear cache after site setup to display the correct content immediately.
 - WPX-9714: Improve plugin card last updated text localization handling.
 - WPX-9796: Increase timeout for SSL in improved onboarding.
 - WPX-9871: Add verify_wptk_userdata script to detect and repair WP Toolkit userdata discrepancies.
 - WPX-9882: Improve verify_wptk_userdata with better domain matching and additional validation and options.
- Implemented Case(s):
 - WPX-8255: Replace page-spinner with Angular Material spinner.
 - WPX-9214: Update WP Admin Redirect page to show errors properly.
 - WPX-9743: Add Thai language support to WP Squared.

cPanel related changes

- Fixed Case(s):
 - CPANEL-45395: Prevent Live Transfer from modifying custom A records that point to external servers.
 - CPANEL-46581: Obfuscate the whm-server-status apache endpoint.
 - CPANEL-48930: Always force jailshell for jailed users crontabs.
 - CPANEL-49245: Stop stripping 'defaults' from fstab for disks which support usrjquota.
 - CPANEL-49693: Additional package prefixes now supported in easyapache UI.
 - CPANEL-50565,CPANEL-50567,CPANEL-50665: Add additional File Manager usage analytics.
 - CPANEL-50838: Allow php*-php-common namespace.
 - CPANEL-50852: Add some DumpFile variants to Cpanel::JSON.
 - CPANEL-50875: Fixed race condition viewing restore/transfer sessions.
 - CPANEL-50911: Fix various issues in openapi specs.
 - CPANEL-50919: Fix masterContainer's data-app-key being set inconsistently in some mysql upgrade 'stage' pages.
 - CPANEL-50960: Teach cpkeyctl about the Comet Backup activation code.
 - CPANEL-50990: Add Annual survey notification.
 - CPANEL-51068: Address 'Use of uninitialized value' errors when saving TweakSettings.
 - CPANEL-51163: Update PHP to 8.4.17.
- Implemented Case(s):
 - CPANEL-50109: Add scripts to view and mass-change PHP versions across all domains.

136.1.1

released on 2026-02-02

WP2 related changes

- Fixed Case(s):
 - WPX-9861: Fix initial account creation when .cpanel/logs directory is missing.
 - WPX-9868: Fixed an issue where preview domain readiness checks could hang indefinitely during account creation due to missing HTTP request timeouts.

2026-01

136.1.0

released on 2026-01-12

WP2 related changes

- Fixed Case(s):
 - WPX-9686: Update npm packages for security updates.
 - WPX-9739: Fix broken path to logo image for WP2 » File Manager.
- Implemented Case(s):
 - WPX-8440: Change Default PHP version to 8.3 on new server installations.
 - WPX-8860: Implement AutoSSL button for a WP2 user to manually start the process.
 - WPX-9202: Implement Finnish-language translations.

cPanel related changes

- Fixed Case(s):
 - CPANEL-46346: Reduce timeouts in DNS Cluster interface by extending peer timeouts from 7->15.
 - CPANEL-48418: Make stats program state/requirements clearer.
 - CPANEL-49029: Fixed XSS vulnerability when using /viewer/ routes.
 - CPANEL-49084: AutoDomain xfer config update will ignore files over 1 MiB.
 - CPANEL-49983: Ensure that WHM-managed IPv4 addresses are added after NetworkManager finishes configuring the basic parameters on the interface.
 - CPANEL-50064: Update the maintenance script to notify the admin of any long-running rpm/apt locks.
 - CPANEL-50065: Block updates if the package manager is actively holding locks.
 - CPANEL-50129: Fix redirect issue for search results on the domains page.
 - CPANEL-50133: Fix issue where new login sessions were not able to make changes to items created in previous sessions from phpMyAdmin.
 - CPANEL-50686: Fix lua-socket for dovecot auth on 7->8 elevated systems.
 - CPANEL-50715: Fix bad auth proxying on mail node setups.
 - CPANEL-50721: Address missing libmariadb.so on upgrade to 132.
 - CPANEL-50725: Fix tailwatch's AuthedMailIPTracker regexp for changes in strings emitted from Dovecot 2.4 (Login: -> Logged in:).

- CPANEL-50742: Allow the Task Queue system to load the POSIX interface Perl module freely again.
- CPANEL-50746: Adjust the default mail_path for virtual users to prevent permission denied errors before mail_path is overridden in userdb/passdb returns.
- CPANEL-50756: Update cpanel-exim to 4.99.1.
- CPANEL-50784: Fix request parsing fallback logic when integrations to dovecot don't set a namespace in the auth request.
- Implemented Case(s):
 - CPANEL-50694: Set dovecot_storage_version to dovecot version for possible compatibility with changes dovecot may or may not have in the future.

2025-12

134.1.3

released on 2025-12-19

cPanel related changes

- Fixed CPANEL-50795: Update PHP to 8.4.16.
- Fixed CPANEL-50788: Update cpanel-php to 8.3.29.
 - Fixed CVE-2025-14177 (Information Leak of Memory in getimagesize).
 - Fixed CVE-2025-14178 (Heap buffer overflow in array_merge()).
 - Fixed CVE-2025-14180 (PDO quoting result null deref).

134.1.2

released on 2025-12-16

WP2 related changes

- Fixed Case(s):
 - WPX-9535: Update wp-toolkit-cpanel package to version 6.9.2-9921.
 - WPX-9662: Fix issues with Extendify SSL checks and WPTK initial domain setup.
- Implemented Case(s):

- WPX-4885: Conditionally display Reseller/Owner column in WHM's List Accounts.

cPanel related changes

- Fixed Case(s):
 - CPANEL-40311: New form field to specify region of S3-compatible backup destinations.
 - CPANEL-50064: Update the maintenance script to notify the admin of any long-running rpm/apt locks.
 - CPANEL-50126: Harden AWStats by removing use of 2 arg opens.
 - CPANEL-50271: Fix ability to set Dovecot ssl.conf settings.
 - CPANEL-50376: Update PHP to 8.4.15.
 - CPANEL-50422: Address additional net-snmp dependency issues not fixed for CPANEL-50161.
 - CPANEL-50422: Address additional net-snmp dependency issues not fixed for CPANEL-50161.
 - CPANEL-50429: Add install script to remove unattended-upgrades package on upgrade to 132.
 - CPANEL-50463: Update unbound to 1.24.2.
 - CPANEL-50612: Fix typo in dovecot.conf template referring to cpdoveauth_domainownerd.sock.
 - CPANEL-50614: Change default value for auth_allow_cleartext to yes to improve compatibility with existing client connections.
 - CPANEL-50623: Re-build Munin so that munin-node can start when IPv6 is disabled.
 - CPANEL-50639: Bump rpm.versions for cpanel-geoipfree-data version 130.3-1.cp130.
 - CPANEL-50639: Bump rpm.versions for cpanel-geoipfree-data version 130.3-1.cp130.

134.1.1

released on 2025-12-11

WP2 related changes

- Fixed Case(s):
 - WPX-7067: Improve user experience on low-resolution devices.

- WPX-8635: Fix incorrect error messaging when a 5xx error occurs from an API call.
- WPX-9213: Fix account restoration issue when the main website has a temporary domain.
- WPX-9338: Fix task timeout in `wpt_extended` adminbin which affected `create_backup`, etc.
- WPX-9466: Fix defect where the rename domain dialog hangs in the interface.
- WPX-9528: Verify the SSL certificate before redirecting to Extendify.
- WPX-9560: Fix the inability for AutoSSL to increase certificate coverage when a preview domain is listed first.
- WPX-9562: Fix issue where max quota website dialog was not showing text.
- WPX-9620: Fix *Manage Website* SSL status showing incorrect status.
- Implemented Case(s):
 - WPX-6142: Refactor the core code base to lazy load all views for improved web performance for a WP2 user.

cPanel related changes

- Fixed Case(s):
 - CPANEL-47901: Change copyable DMARC record to include `_dmarc`.
 - CPANEL-48012: Reinitialize CardDAV config post-transfer.
 - CPANEL-49007: Avoid unnecessary NS lookups for temporary domains.
 - CPANEL-49569: Add `--stdout-archive` to `pkgacct`.
 - CPANEL-49633: Add support for CloudLinux 10 in 134.
 - CPANEL-49683: Update awstats pkg for CVE-78/PTT-2025-021.
 - CPANEL-49953: Allow skipping of DKIM keys in `pkgacct`.
 - CPANEL-49965: Add missing `--disable` flags and `--from-stdin` to `restorepkg`.
 - CPANEL-50088: Change default NSEC3 parameters to match current recommendations (RFC 9276).
 - CPANEL-50088: Allow specifying `no salt` when configuring NSEC3 for DNSSEC-enabled domains using UAPI calls.
 - CPANEL-50318: Adjust OS detection for modern distros including CL10.
 - CPANEL-50319: Set `session.gc_divisor` to a non-negative value to avoid PHP warning messages.
- Implemented Case(s):
 - CPANEL-47230: Allow HTTPS update servers.
 - CPANEL-49240: Add support for HTTPS records for PowerDNS.
 - CPANEL-49304: Remove some Perl version checks at run-time.

- CPANEL-49395: Indicate that Ubuntu 22 can be upgraded to Ubuntu 24 using ELevate.

2025-11

132.1.9

released on 2025-11-24

WP2 related changes

- Fixed Case(s):
 - WPX-8897: Update the WP Squared icon in WHM's List Accounts table.
 - WPX-9062: Disable legacy locale-managing features in WHM.
 - WPX-9322: Fix Zone Editor issue with subdomain accounts.
 - WPX-9339: Fix defect where 'Bulk Actions' selection did not show options in the Account Settings » CDN table.
- Implemented Case(s):
 - WPX-8073: In the Security tab, show the number of vulnerabilities mitigated in the last year, if available.
 - WPX-9432: Update wp-toolkit-cpanel package to version 6.9.1-9852.
 - WPX-9484: Update the API spec to clarify the meaning of has_reached_quota values.

cPanel related changes

- Fixed Case(s):
 - CPANEL-49802: Report in Security Advisor when the system erroneously detects that Imunify360 PAM brute-force attack protection is disabled.
 - CPANEL-50088: Change default NSEC3 parameters to match current recommendations (RFC 9276).
 - CPANEL-50088: Allow specifying no salt when configuring NSEC3 for DNSSEC-enabled domains using UAPI calls.
 - CPANEL-50161: Ensure that net-snmp is dependent on system packages instead of a package provided via rpm.versions.
 - CPANEL-50170: Abandon RFC 2047 escaping of the SpamAssassin spam report email headers and replace non-ASCII codepoints with underscores.

- CPANEL-50178: Fix issue where builddovecotconf would not migrate the disable_plaintext_auth=no setting to auth_allow_plaintext=yes.
- CPANEL-50201: Ensure Mailscanner dependencies persist through Perl upgrades.
- CPANEL-50339: Allow for Nodejs variants.
- Implemented Case(s):
 - CPANEL-50028: Update Exim to 4.99.

132.1.7

released on 2025-11-12

WP2 related changes

- Fixed Case(s):
 - WPX-5099: Improved visibility for the active tab in website details, making navigation clearer.
 - WPX-5104: Update sidebar tooltips.
 - WPX-5665: Removed deprecated API code (WP::add_domain and WP::delete_domain).
 - WPX-7819: New clones and staging sites now automatically match the PHP version of their source website.
 - WPX-8252: Enforce account component overrides at a server level.
 - WPX-8615: Fix broken link in Filemanager for navigating back to the WP2 interface.
 - WPX-8766: Update wp-toolkit-cpanel package to version 6.9.0-9869.
 - WPX-8827: Fixed database upgrade accessibility issue in WHM and resolved a 403 error in Manage Database Profiles.
 - WPX-8923: Prevent renaming a primary website to a new one that starts with 'www'.
 - WPX-8957: Fixed a segmentation fault in bin/restorepkg occurring in rare cases.
 - WPX-8987: Corrected SSL certificate check behavior on the dashboard.
 - WPX-9007: Fix broken link display on 404 error page.
 - WPX-9212: Fix the handling of WP2 defaults during account creation.
 - WPX-9289: Add some mitigation warnings for users nearing their disk quota limit. Add a UAPI call to check if a user has reached their disk quota.
- Implemented Case(s):

- WPX-5165: Introduced Preview Links and enhanced onboarding to simplify the WordPress setup experience.
- WPX-7474: Disable 'should vulnerable plugins be automatically deactivated' by default in WP2 >> Website Settings.
- WPX-7975: Update the WP Squared interface to use Angular 20.
- WPX-8496: The Recommended filter now only appears in the plugin install dialog when relevant plugins are available.
- WPX-8694: The CDN and SSL panels now auto-expand when accessed from the website overview page for faster navigation.
- WPX-8833: Clarified EasyApache 4 notice for better understanding.
- WPX-8950: Set new default values for 'memory_limit' and 'max_execution_time' in php.ini.

cPanel related changes

- Fixed Case(s):
 - CPANEL-39397: Fixed the terminal inside of cPanel to use the memory limits for the user.
 - CPANEL-45613: Permit 0 as a valid value for nsec3_iterations in PDNS.
 - CPANEL-46038: Check "/etc/sysconfig/exim" for validity during nightly cPanel maintenance.
 - CPANEL-46080: Improve accuracy and performance for what should be 404 requests.
 - CPANEL-46582: Add local **sudoers** group names to reserved usernames.
 - CPANEL-46939: Mailman: Add Apache conf to protect against XSS in list archives.
 - CPANEL-47114: Transfer system now has support for automatically assigned domains.
 - CPANEL-47362: Add panel.ini control to WebPros SSO option.
 - CPANEL-47922: Upgrade cpanel-dovecot to 2.41.
 - CPANEL-47960: Remove the 'HTML Editor Removal' Notification in WHM.
 - CPANEL-47960: Integrate Jodit Editor into File Manager as the new HTML Editor (beta).
 - CPANEL-48012: Reinitialize CardDAV config post-transfer.
 - CPANEL-48013: Fix bad defaults for auth policy on Ubuntu in Cpanel::Config::Auth.
 - CPANEL-48042: Additional validation for temporary domain conversion.
 - CPANEL-48241: Update cpanel-perl to 5.42 and related CPAN modules.
 - CPANEL-48317: Upgrade AWStats to 8.0.

- CPANEL-48354: Always allow the system to install kernel modules during initial cPanel install.
- CPANEL-48362: Allow cpanel-3rdparty-bin package to handle symlink to /usr/local/cpanel/3rdparty/bin/perl during cPanel update.
- CPANEL-48408: Fixed display of yum/dnf errors during the review stage of provisioning for EasyApache 4.
- CPANEL-48436: Ensure yum-config-manager check is local-setting agnostic.
- CPANEL-48458: Ensure that image preparation scripts find the correct MySQL/MariaDB unit.
- CPANEL-48470: Do not rely on the Cpanel-OS cache in fix-cpanel-perl.
- CPANEL-48473: Update cpanel-php84 to 8.4.11 in etc/rpm.versions.
- CPANEL-48487: Fix bug in Cpanel::SSL::Objects::Certificate::File where private keys were not separated from certificates during instantiation.
- CPANEL-48487: Catch errors initializing SSLEay object during SSL cert verification and treat it as a failure to verify.
- CPANEL-48518: Handle system package repository installations which come with both obsolete and valid keys.
- CPANEL-48520: Ensure that the nscd entry in Service Manager always knows the path to the program.
- CPANEL-48521: Make Packman more resilient against bad or unexpected data on the mirrors.
- CPANEL-48540: Make dependency on "acl" package explicit for all supported RHEL-derived distributions.
- CPANEL-48552: Fix bug in Whostmgr::API::1::AdvConfig where setting incoming_reached_quota for dovecot did not also rebuild dovecot and exim's configuration.
- CPANEL-48552: Restore quota_clone configuration block in dovecot.
- CPANEL-48581: update requirejs to address CVE-2024-38999.
- CPANEL-48633: Add systemd-logind to the list of services to ignore for find_outdated_services.
- CPANEL-48641: Handle rare file unlock condition when PID has not changed.
- CPANEL-48665: Implement API calls for in product survey.
- CPANEL-48719: Users are now asked to complete the survey after logging in the WHM.
- CPANEL-48723: Change the way the MySQL community repository is installed on the system.
- CPANEL-48730: Users are now asked to complete the survey after logging in.
- CPANEL-48811: Blocked unauthenticated users from enabling debug mode via a query parameter in the URL.
- CPANEL-48836: Change `tech_domain` warning to an info log entry.

- CPANEL-48843: Fix restoration issues when domains aren't restored.
- CPANEL-48960: Fix potential race condition in the cPanel Log and Bandwidth Processor daemon.
- CPANEL-49007: Avoid unnecessary NS lookups for temporary domains.
- CPANEL-49050: Update CGI::Simple to address CVE-2025-40927.
- CPANEL-49082: Teach create account page to respect the unlimited radio button.
- CPANEL-49106: Update Cpanel::JSON::XS and JSON::XS to address CVE-2025-40929.
- CPANEL-49116: Arbitrary file download possible for users missing ACL for filemanager feature.
- CPANEL-49149: Switch TicketSupport ssh checks to use lsof.
- CPANEL-49202: Bump rpm.versions for cpanel-clamav.
- CPANEL-49216: Bump rpm.versions for cpanel-geoipfree-data.
- CPANEL-49232: Set the main shared IPv6 address as the default route for outgoing ipv6 traffic when possible.
- CPANEL-49246: Skip NS lookups for temporary domains.
- CPANEL-49378: Ensure quota_clone dict entry always exists in dovecot.conf.
- CPANEL-49379: Guard against undefined return from readdir in Cpanel::FileUtils::Dir.
- CPANEL-49422: Line-wrap the encoded SpamAssassin report in email headers to better comply with RFC 2047.
- CPANEL-49530: Suppress warning in Cpanel::Config::userdata::Guard when the account is deleted before it can setup the userdata dir.
- CPANEL-49542: Upgrade Devel::Cover to an officially supported version for perl 5.42.
- CPANEL-49551: Fixed issue where user's crontab does not delete when the cPanel account is terminated.
- CPANEL-49573: Update cpanel-userperl for 132.
- CPANEL-49611: Fix spurious warning in xfer logs regarding doveadm syncs.
- CPANEL-49671: Bump YAML::Syck to 1.36.
- CPANEL-49683: Update awstats pkg for CWE-78/PTT-2025-021.
- CPANEL-49953: Allow skipping of DKIM keys in pkgacct.
- CPANEL-49965: Add missing --disable flags and --from-stdin to restorepkg.
- CPANEL-50005: Update PHP to 8.4.14.
- CPANEL-50079: Force dovecot config rebuild on update of dovecot.
- CPANEL-50079: Prevent run of install/FixSolr.pm when Solr is not installed.
- CPANEL-50079: Stop prefixing userdb/passdb returns in dovecot auth dict.
- CPANEL-50082: Update dovecot to version 2.4.2 to fix CVE-2025-30189.

- CPANEL-50093: Fix issue where HTTP::Tiny::UA was unavailable in the scope of scripts/builddovecotconf due to check_cpanel_pkgs run.
- CPANEL-50113: Ensure dovecot_config_version always equals dovecot version in dovecot.conf.
- Implemented Case(s):
 - CPANEL-45720: Password and API Token notification improvements.
 - CPANEL-46411: Add a way to set the default dmarc record.
 - CPANEL-46549: Add robots meta tag to login pages.
 - CPANEL-47291: Enable pigeonhole sieve in dovecot + roundcube.
 - CPANEL-47691: Update supporting code for cpanel-dovecot to support 2.4.
 - CPANEL-47836: Allow parking registered domain on temporary domain.
 - CPANEL-47980: The cPanel tools page sidebar now highlights SSL certificate issues and provides direct links for users to resolve them.
 - CPANEL-48174: Optimize wptk api routes.

132.1.6

released on 2025-11-05

cPanel related changes

- Fixed Case:
 - SEC-70235: Security Fix Disclosure coming soon.

2025-09

132.1.5

released on 2025-09-03

WP2 related changes

- Fixed Case(s):
 - WPX-2487: Added messaging when CDN configuration is using invalid API keys.
 - WPX-8801: Clear plugin cache each time get_login_url is called to avoid login link failure.

- WPX-8868: Fix a DNS sync issue when adding new domains with CDN admin mode enabled.

2025-08

132.1.4

released on 2025-08-28

WP2 related changes

- Fixed Case(s):
 - WPX-6087: Remove WPTK IDs in userdata that no longer exist in WPTK.
 - WPX-8148: Add 'Manage CDN' as a newly configurable feature.
 - WPX-8801: Clear plugin cache on site creation to avoid login link failure.
- Implemented Case(s):
 - WPX-1660: Update some no results images that show when searching for plugins or themes.
 - WPX-5106: Add a website's SSL status to the overview tab.
 - WPX-5966: Remove the WP::add_notification API.
 - WPX-7647: Add a sort for websites that have a vulnerability notification.

132.1.3

released on 2025-08-12

WP2 related changes

- Fixed Case(s):
 - WPX-3310: Additional directory cleanup when removing website.
 - WPX-7221: Update the WP::list_domains API to return information about vulnerability protection being enabled for a specific website; update UI to consume data from this point.
 - WPX-7900: Add information to the vulnerability protection table indicating vulnerabilities that are applicable for inactive themes or plugins; move vulnerabilities to lower order of table.

- WPX-8299: Fixed a bug that would sometimes cause the temporary domain notification to stay after modifying the main domain name.
- WPX-8329: Address concern with toast appearing before modal closes.
- WPX-8330: Improve traffic graph styling to prevent overflow behind notification column.
- Implemented Case(s):
 - WPX-6250: Add 'Site Staging' as a newly configurable feature.
 - WPX-6258: Add 'Site Cloning' as a newly configurable feature.
 - WPX-6490: Rename WP::`list_domains` to WP::`list_websites`; deprecate WP::`list_domains`.
 - WPX-6692: Update WPTK config to no longer turn off 'Search Engine Indexing' on cloned instances.
 - WPX-6774: Add 'recommended plugins' for WP2, including a banner indicating when plugin(s) missing, as well as a specific filter in the uninstalled plugins dialog.
 - WPX-6893: Add SSL certificate support in `restore_website_metadata` API.
 - WPX-8407: Update wp-toolkit to 6.8.0-9497.

cPanel related changes

- Fixed Case(s):
 - CPANEL-37236: Enable DNS TXT records over 255 characters in WHM Zone Manager.
 - CPANEL-47026: Fix WHM Add a DNS Zone to give proper ownership for system domains.
 - CPANEL-47992: Allow temporary domain creation when 'Allow Remote Domains' is false.
 - CPANEL-48060: Update PHP to 8.4.10.
 - CPANEL-48140: Adjust RELEASE rollout logic to use a 5 day release cycle.
 - CPANEL-48149: Bump rpm.versions for update to cpanel-git-2.48.2.
 - CPANEL-48204: Add new Domain category hook `replace_temporary_domain`.
 - CPANEL-48296: Update cpanel-sqlite to 3.50.3 for CVE-2025-6965.

2025-07

132.1.1

released on 2025-07-16

WP2 related changes

- Fixed Case(s):
 - WPX-7484: Error pages have updated styles and messaging.
 - WPX-7556: Fix need for double click on red shield from websites table.
 - WPX-7591: Improve dependency handling for optional plugins.
 - WPX-7657: Update default theme sets.
 - WPX-7770: Do not show the 'HTML Editor Removal Notice' on WP2 servers.
 - WPX-7773: Fixed a bug when modifying a domain name, it would sometimes re-open the modal unintentionally.
 - WPX-7895: Create TaskProcessor for clearing all users cache by key.
 - WPX-8268: Update wp-toolkit-cpanel package to version 6.7.3-9456.
- Implemented Case(s):
 - WPX-4688: Add integrator APIs for backup and restore of a WP2 website.
 - WPX-5926: Website list image hides and unhides based on number of visible websites including nested rows.
 - WPX-7862: Fix a bug where the vulnerability protection icon was getting hidden on smaller screens.

cPanel related changes

- Fixed Case(s):
 - CPANEL-46705: Fixed issue with the 'All' filter in the DNS Zone Manager.
 - CPANEL-47902: Use the system SQLite3 package to read bandwidth database entries.
 - CPANEL-48095: Obsolete "Forks" package in cPanel Perl.
 - MOON-2973: Improved accessibility in the Account Preferences page.

2025-06

130.1.5

released on 2025-06-30

WP2 related changes

- Fixed Case(s):
 - WPX-7589: Improve dependency handling for optional plugins.

- WPX-7613: Fixed a bug that would cause an inaccurate pagination menu.
- WPX-7739: Disk usage for staging sites now listed on the websites list.
- WPX-7740: Website details overview disk usage now has more data.
- WPX-7741: Update wp-toolkit-cpanel to version 6.7.2-9425.
- Implemented Case(s):
 - WPX-7113: Add 'ignore low risk vulnerabilities' functionality to Vulnerability Protection, powered by Patchstack.

130.1.4

released on 2025-06-24

WP2 related changes

- Fixed Case(s):
 - WPX-3498: Use WP2 branding in iContact notifications.
 - WPX-5209: Updated pagination styles.
 - WPX-5270: Reverse order of what is displayed inside and outside parentheses for all language selections.
 - WPX-6599: Auto update settings now show correct state after backup restore.
 - WPX-6923: Fixed a bug that would cause locale changes to not update during initial onboarding.
 - WPX-7210: Install accelerate-wp package once licensed.
 - WPX-7447: Ensure notifications created at the 'warn' level have an icon present on the notification card in the UI.
 - WPX-7614: Website list does not hide some action buttons on smaller screen resolutions.
 - WPX-7690: Update wp-toolkit-cpanel to version 6.7.1-9415.
 - WPX-7711: Fix AutoSSL certificate renewal for temporary domains.
- Implemented Case(s):
 - WPX-1630: Update the styles of the theme cards.
 - WPX-5755: Disk space usage per website is now visible on the website list and the website details overview tab.
 - WPX-7537: Optimize the list_domains UAPI call.

cPanel related changes

- Fixed Case(s):
 - CPANEL-46032: Update cpanel-awstats to 7.9-2.

- CPANEL-47662: WHM users will see the in-page banner informing about restricted usage of the DNS Zone Manager feature when user's account does not have registered domains assigned.
- CPANEL-47664: Update cpanel-file-find-rule to 0.35 in etc/rpm.versions.
- CPANEL-47678: Update cPanel PHP to 8.4.7.
- CPANEL-47764: Unship cpanel-php-composer package.
- CPANEL-47815: Depend on distro PostgreSQL for DBD::Pg.
- Implemented Case(s):
 - CPANEL-47687: Bump rpm.versions for cpanel-php83 update to 8.3.22.

130.1.3

released on 2025-06-04

WP2 related changes

- Fixed Case(s):
 - WPX-7464: Upgraded WP Squared accounts do not have vulnerability protection working.
 - WPX-7467: "Take Action" button and notification are visible when vulnerability protection is disabled.
 - WPX-7465: Vulnerability protection "feature showcase" is not visible.

130.1.2

released on 2025-06-03

WP2 related changes

- Fixed Case(s):
 - WPX-5973: Ensure that 'enable_cdn' UAPI doesn't fail due to parsing error in the CloudFlare CDN driver.
 - WPX-6280: Fixed an issue where custom titles were not being applied to customization icons in the side nav bar.
 - WPX-6502: Add third-party theming info to Storybook.
 - WPX-7081: Address typo in string in website details and table.
 - WPX-7180: Improved error handling when there is missing plugin information.

- WPX-7229: Remove the 'Replace with a registered domain' option from the 'Modify an Account' interface in WHM.
- Implemented Case(s):
 - WPX-5164: Implement Vulnerability Protection, powered by Patchstack.
 - WPX-6002: Allow WH companies to enable and customize an email link/icon in the WP2 product.
 - WPX-6254: Add 'Temporary Domains' to the feature manager and require the 'Temporary Domains' feature to utilize temporary domains when creating or cloning websites.
 - WPX-6359: Long domain names will now be truncated in the websites list table.

cPanel related changes

- Fixed Case(s):
 - CPANEL-46029: Exclude kernel-devel* from rpmup.
 - CPANEL-47057: Remove temporary domain on account domain modification.
 - CPANEL-47060: Exclude temporary domains from DomainInfo API unless requested.
 - CPANEL-47062: UAPI Domain::is_temporary_domain + API2 domain updates.
 - CPANEL-47113: Block transfers of temp domains to servers that do not support it.
 - CPANEL-47156: Prevent temporary domains from showing in cPanel Zone Editor.
 - CPANEL-47375: Fix lines with ',' or '=> =>' in them.
 - DUCK-2612: Adjust the whm top webcomponent to retain existing extensibility model and make the trend arrows work together.
- Implemented Case(s):
 - CPANEL-46175: Add option in transfer tool and restorepkg to not restore DNS records for an account.
 - CPANEL-47227: Bump rpm.versions for cpanel-php83 update.
 - CPANEL-47284: Ensure temporary domains are removed upon account termination.
 - CPANEL-47318: Bump rpm.versions for the latest version of Perl::Tidy.

2025-05

130.1.1

released on 2025-05-19

WP2 related changes

- Fixed Case(s):
 - WPX-6223: Fixed a bug that would prevent a maintenance mode background image from being uploaded.
 - WPX-7075: Notifications now use icons instead of colored dots.
 - WPX-7179: Fix Plugins tab list when installing plugins like Imunify360.
 - WPX-7191: Fix nginx configuration when using Imunify360.

cPanel related changes

- Fixed Case(s):
 - CPANEL-44093: By displaying the current trend icon in the Load Averages component in the WHM header, users gain better clarity on system resource load status at a glance.
 - CPANEL-46823: Update re2c to 4.2.
 - CPANEL-46839: Bump rpm.versions to update cpanel-clamav to 1.0.8-1.cp118.
 - CPANEL-46845: Update PowerDNS to 4.9.5.
 - CPANEL-46895: Grant MySQL database privileges for cPanel users who have the SUPER privilege.
- Implemented Case(s):
 - RE-1421: New tweak setting to specify the file size used by the securetmp script for /tmp and /var/tmp.

130.1.0

released on 2025-05-08

WP2 related changes

- Fixed Case(s):
 - WPX-3084: Fix bug preventing default set from being configured during install.
 - WPX-6385: Fix the styles on dialogs to improve box shadow.
 - WPX-6527: Hide performance card in overview tab when no data is returned.
- Implemented Case(s):

- WPX-4798: Users can now use **wp** cli from command line.
- WPX-5044: List all EasyApache PHP versions installed ≥ 7.0 .
- WPX-5162: Add support for temporary domains. Accounts or websites can be created using a temporary `wpsquared.site` domain and renamed later.
- WPX-5501: Improved navigation on notifications.
- WPX-5502: Remove superfluous password confirmation input when setting a password for a staged site.
- WPX-5775: Improve HTTP DCV for new domains by removing the **mail** alias and adding **wp** and **wp2** aliases.
- WPX-6055: Implement a ProductConfig mechanism for global product-level config.
- WPX-6222: Separate the Redis object-caching feature from the AccelerateWP feature in WHM's Feature Manager.
- WPX-6661: Change Default PHP Version to 8.2 on new server installations.
- WPX-6753: Add ProductConfig option to not warn about missing theme in restores.
- WPX-6864: Update wp-toolkit-cpanel to version 6.7.0-9317.
- WPX-6955: Add AAAA and SRV records to advanced zone editor interface.

cPanel related changes

- Fixed Case(s):
 - CPANEL-35466: Enhanced the PowerDNS error message to provide additional context from `data.warnings.PowerDNS` and included a link to the relevant documentation for improved clarity and user guidance.
 - CPANEL-46112: Added more user checks for DMARC record addition.
 - CPANEL-46605: Docs improvement to `get/set_notification_preferences` UAPI functions.
 - CPANEL-46608: Fix uninitialized variable warnings in bandwidth DB restoration.
 - CPANEL-46667: Integrated Change Password section with backend API and MixPanel tracking on form submit action.
 - CPANEL-46668: Integrated Contact Preferences section with backend API and MixPanel tracking on form submit action.
 - HB-7912: Prevent event update notifications/invites from non-organizers.
 - HB-8226: Fix path display names in certain DAV queries.
 - RE-1399: Changed addon domain conversion to set the new account to use the inherited PHP version when appropriate.
 - RE-1401: Ensure `cpsrvd`'s memory limits are properly set upon startup.

- RE-1418: Update cpanel-exim to 4.98.1-2.cp118 in etc/rpm.versions to fix CVE-2025-30232.
- RE-1419: Speed up autodomains configuration during post snapshot.
- RE-1421: New tweak setting to specify the file size used by the **securetmp** script for **/tmp** and **/var/tmp**.
- RE-1425: Update EOL blocker message in upcp to reference ELevate where relevant.
- RE-1487: Bump rpm.versions for cpanel-php83 8.3.20.
- ZC-12783: Prevent cpdavid deadlocks by isolating SSL_CTX in child processes.
- Implemented Case(s):
 - CPANEL-46895: Grant MySQL database privileges for cPanel users who have the SUPER privilege.
 - CPANEL-46985: WHM users can now choose between a temporary domain or an existing domain when creating an account.
 - CPANEL-47054: Added 'is_temporary_domain' boolean to listaccts API.
 - HB-8229: Add get/set_notification_preferences to UAPI.
 - HB-8230: Add UAPI call to change a cPanel user's system password.
 - RE-1398: Add UAPI calls for saving and retrieving the Pushbullet access token associated with user notifications.

2025-04

128.1.5

released on 2025-04-14

cPanel related changes

- Fixed Case(s):
 - RE-14777: Update rpm.versions for cpanel-perl-536: CVE-2024-56406: Heap-buffer-overflow with 'tr//'.

2025-03

128.1.4

released on 2025-03-25

WP2 related changes

- Fixed Case(s):
 - WPX-1179: Update the websites list icon for the website details and arrange the WP Admin button to be first.
 - WPX-2659: Add Welcome Notification on account creation.
 - WPX-4833: Add additional navigation buttons to the create website workflow.
 - WPX-5540: Refactor websites table actions column for improved user experience; add 'Manage Zones' action if applicable to website.
 - WPX-5610: Refactor permanent notifications so permanency and type are separate.
 - WPX-5815: Disable redis-cache plugin on staging instances.
 - WPX-5816: Reduced time to display domain name when onboarding a new account and website.
 - WPX-5818: Add new UAPI call: 'DomainInfo::primary_domain'.
 - WPX-5849: Fixed an issue that would sometimes display broken customization logos. A browser console error is now displayed in this event.
 - WPX-5861: Move CDN configuration interface from 'Settings' tab to 'Advanced' tab in website details view.
 - WPX-5979: Enable SSL Redirect by default on new domains.
 - WPX-6066: Fix issue where forwarding websites have access to unusable actions after updating forwarding type.
 - WPX-6086: Fix issue where site with no name breaks websites table.
 - WPX-6094: Fix issue with custom help link going to 404 from left navigation.
 - WPX-6095: Add documentation link to side navigation.
 - WPX-6233: Fix a bug where the advanced tab was not loading for newly created websites.

cPanel related changes

- Fixed Case(s):
 - HB-7958: Add **HASDMARC** to list of restoreable CPUSER keys.
 - HB-8219: Ignore 'nobody' user data for hostname if "Allow users to park subdomains of the server's hostname" setting is enabled.
 - MOON-2828: Add the new strings to fix the warnings.
 - MOON-2878: Fix styling in WHM favorite cards.
 - RE-1274: Update cpanel-ioncube to 14.4.0 in rpm.versions.
 - RE-1318: Fix Security Advisor detection of Suexec.

- RE-1319: Reject DB imports larger than PHP download limits in myadmin.
- RE-1322: Fix bug in the AdminBin layer where the "enable_api_log" setting in cpanel.config could cause API calls to fail for suspended accounts.
- RE-1346: Resume use of BIND zone-checking utilities when ALIAS records are not present.
- RE-1358: Fix IPv6 Overlap check for shared IP in Whostmgr::TweakSettings::Basic.
- RE-1393: Update cpanel-php83 to 8.3.19 in etc/rpm.versions.
- RE-1419: Speed up autodomains configuration during post snapshot.
- WPX-6056: Implement a ProductConfig mechanism for global product-level config.
- WPX-6083: Update GeoIP package to 20250307 version.
- Implemented Case(s):
 - HB-7170: Extend RRULE handling for freebusy requests.
 - WPX-5831: Teach the (deprecated) Sectigo AutoSSL provider to recognize certificates signed by an updated CA.

2025-02

128.1.3

released on 2025-02-27

WP2 related changes

- Fixed Case(s):
 - WPX-5089: Update change log link for WHM >> Change Log.
 - WPX-5702: Disable Redis Object Cache Pro promotional banner in wp-admin.
 - WPX-5748: Fix up wwwacct.conf NS entries from 'cprapid.com' to 'wp2.host'.
 - WPX-5814: Fix extraneous plugin deleting when dialog is closed.
 - WPX-5857: Update copyright on login pages to reflect current year.
 - WPX-5935: Fix incorrect onboarding workflow when server analytics are turned off.

cPanel related changes

- Fixed Case(s):
 - HB-8184: Add touchfile to disable cpdavd TLS caching for OpenSSL < v3.

- RE-1219: Update cpanel-analog, cpanel-ldns, cpanel-libzip, cpanel-libtidy, cpanel-mariadb-connector, cpanel-p0f, cpanel-puttygen, cpanel-re2c, cpanel-rrdtool, and cpanel-webalizer.
- RE-1226: Do not add active root hint zones to the DNS server configuration.
- RE-1227: Update BackBlaze B2 backup transport to use the v3 API.
- RE-1228: Fix database restores where there is a definer set when creating a trigger.
- RE-1325: Re-classify cpanel-oniguruma-devel package to fix potential issues when upgrading from 118.
- RE-1326: Update cpanel-exim to 4.98.1.
- WPX-3021: Improve bin/checkallsslcerts pre-DCV checks and error handling.
- ZC-12594: Fix failure to upgrade to MariaDB 11.4.
- Implemented Case(s):
 - RE-1292: Ship cpanel-perl-536-datetime-event-recurrence and dependencies.
 - RE-1339: Ship cpanel-perl-536-datetime-event-ical.

128.1.2

released on 2025-02-19

WP2 related changes

- Fixed Case(s):
 - WPX-826: Do not show installed themes from search results.
 - WPX-1822: The website list interface resets checkbox state upon website deletion.
 - WPX-2800: Fetch Notifications when the user goes to the website details page to ensure all the notifications are captured.
 - WPX-3714: snapshot_prep will now do some minimal RHN cleanup on CloudLinux.
 - WPX-4886: Implement the ability for the user to sync the production site back to the staged site.
 - WPX-4986: Restore staging instances during transfers and restores.
 - WPX-5048: The website list interface now remembers rows that have been expanded between sessions.
 - WPX-5051: Add a permanent notification to websites with a staging site.
 - WPX-5339: Improve bin/manage_hooks cleanup when removing hooks from a package.

- WPX-5344: Clicking username or domain selects or delects checkbox for terminating accounts.
- WPX-5352: Always show the analytics opt-in/opt-out page during onboarding.
- WPX-5365: Add more descriptive tooltip text for the staging button when a site has a staging site.
- WPX-5412: Ensure the 'default' package is properly applied during transfers.
- WPX-5497: Update wp-toolkit-cpanel to version 6.7.0-9124.
- WPX-5551: Ensure that password protection is preserved during transfers.
- WPX-5574: Fix issue where pressing cancel action acted as confirmation.
- WPX-5588: Fix issue where file upload would not allow click upload.
- WPX-5597: New WP2 servers will enable remote and unregistered domains by default.
- WPX-5609: Fix the icons on the notification cards that were not showing.
- WPX-5625: Removed twentytwentyfour theme for new installs.
- WPX-5643: Update wp-toolkit-cpanel to version 6.7.0-9132.
- WPX-5652: Switch order of onboarding pages so site naming happens before theme selection.
- WPX-5657: Rename `WP::add_domain` UAPI call to `WP::create_website`.
- WPX-5661: Rename `WP::delete_domain` to `WP::remove_website`.
- WPX-5672: Hide installed plugins from search.
- WPX-5693: Fix icon color palette to not appear disabled.

cPanel related changes

- Fixed Case(s):
 - MOON-2578: Modernize the Manage Account Suspension page.
 - MOON-2586: Display the information regarding user's analytics participation.
 - MOON-2603: Add tracking on the link clicks on the WHM tools page.
 - MOON-2604: Add analytics tracking for links in WHM's main menu.
 - MOON-2605: Improve navigation for History Reports in cPHulk.
 - MOON-2679: Fix home symbol to accurately reflect document root when creating a new domain in cPanel.
 - MOON-2682: Update descriptions of Zone Editor in WHM's Feature Manager.
 - MOON-2697: Fixed issue with path shown when changing domains document root in cPanel.
 - RE-922: Filter out CloudLinux Network messages to prevent Security Advisor false positives.
 - RE-982: Skip slow rollout when the major version for the release and stable tier are the same.
 - RE-1171: Switch to using distro provided pigz for cPanel.

- RE-1173: Update cpanel-php83 to 8.3.16.
- RE-1178: Fix issue in cpanel's internal error reporting logic when UID or GID cannot be found for a given user/group combo.
- RE-1182: Update cpanel-sqlite to 3.48.0.
- RE-1188: Update cpanel-phpmyadmin to 5.2.2.
- RE-1190: Update cpanel-p0f to 3.09b-2.cp108.
- RE-1193: Remove the cpanel-pigz package.
- RE-1211: Remove restriction on IPv6 range addition when the range only overlaps the server's Main IP.
- RE-1213: Updated the following packages to ensure file consistency across platforms: cpanel-angular-chosen, cpanel-angular-growl-2, cpanel-angular-minicolors, cpanel-bootstrap, cpanel-bootstrap-devel, cpanel-fontawesome, cpanel-git-templates, cpanel-jquery-minicolors, cpanel-moment-devel, and cpanel-yui.
- RE-1229: Fix issue with BIND leaving cruft in the named.conf file when deleting accounts after having rebuilt the dns config.
- RE-1277: Update cpanel-php83 to 8.3.17.
- ZC-9351: Fix Optimize Website causing high CPU load.
- ZC-12552: Remove generated hostnames from Change Hostname.

128.1.1

released on 2025-02-04

WP2 related changes

- Fixed Case(s):
 - WPX-5670: Fix broken 2FA page not showing interface.

2025-01

128.1.0

released on 2025-01-27

WP2 related changes

- Fixed Case(s):
 - WPX-2938: Only enable CageFS if not already enabled.
 - WPX-3103: Support for Bring Your Own License (aka BYOL) with WP2.
 - WPX-3646: Loading step indicators throughout the product have been updated for clarity.
 - WPX-4625: Only display Terminal when feature is available.
 - WPX-4781: Improve zone editor user experience by creating API to provide records for a given domain.
 - WPX-4922: Page text while staging a domain has been adjusted for added clarity.
 - WPX-4997: Add a warning to the publish website dialog to warn the user if a publish could break the parent's theme.
 - WPX-5006: Update the PHP version of the production website when publishing a staging website if needed.
 - WPX-5050: Disable 'Create Staging' website icon when a staging website already exists.
 - WPX-5061: Fix condition where loading bar for labels in website details never closes.
 - WPX-5084: Remove extraneous success notification for publish site actions.
 - WPX-5117: Avoid adding multiple cprapid entries in Apache configuration.
 - WPX-5131: Migrate WP backups to new standard location.
 - WPX-5192: Update create and modify account templates to disable spellcheck.
 - WPX-5193: Update GeoIP DB to version 20241210.
 - WPX-5196, WPX-5059: Update wp-toolkit-cpanel to 6.7.0-9049, and save backups in a new location.
 - WPX-5233: Fix forever loading bug after backup restore.
 - WPX-5282: Ensure the 'default' package is properly applied during transfers.
 - WPX-5315: Add a new API call SSH.get_shell to get the user shell and check if the user can access terminal.
 - WPX-5319: Configure higher default IO limits for LVE.
 - WPX-5343: Update pkgacct to include WPTK backups.
 - WPX-5351: Fix race condition between naming first site and loading data for that site.
 - WPX-5364: Restore WPTK backups as part of the restore process.
 - WPX-5424: Clean up WPTK backup dir for user on account termination.
 - WPX-5437: Improve WHM localization for more completeness.
- Implemented Case(s):
 - WPX-1411: Enable CageFS & MySQL Governor.
 - WPX-4177: Ability to setup a password protection when creating a staging website.

cPanel related changes

- Fixed Case(s):
 - MOON-2584: Remove an obsolete cPanel feature (Change Style) from WHM > Feature Manager.
 - RE-118: Add generic EOL banner in WHM.
 - RE-646: Return proper message when the “fetch_vhost_ssl_components” WHM API call has an internal error.
 - RE-780: Update recoverymgmt cron to only execute once per day.
 - RE-938: Revert changes from CPANEL-42994.
 - RE-982: Skip slow rollout when the major version for the release and stable tier are the same.
 - RE-984: Better handle a missing cPanel install version file when collecting UI analytics information.
 - RE-994: Ensure packages created by resellers default to the value set for "Max hourly emails per domain" in the Tweak Settings.
 - RE-1035: Update AWStats to version 7.9.
 - RE-1037: Update cpanel-dovecot to 2.3.21.1.
 - RE-1038: Make cPanel depend on the Zstd library.
 - RE-1038: Update cpanel-mariadb-connector to 3.3.13.
 - RE-1040: Update RRDtool to 1.9.0.
 - RE-1041: Upgrade SQLite to 3.47.2.
 - RE-1063: Drop support for Python2 in cPanel & WHM.
 - RE-1072: Update cpanel-pdns to rely on upstream libboost and mark the cpanel-boost* packages as obsolete in rpm.versions.
 - RE-1074: Update cpanel-php83 to 8.3.15-1.cp118 in rpm.versions.
 - RE-1091: Remove cpanel-perl-536-inline-python.
 - ZC-12388: Fix DNS using outdated config cache.

2024-12

126.1.5

released on 2024-12-12

WP2 related changes

- Fixed Case(s):

- WPX-4141: Fix some styling issues when in non English languages. Change how websites list table sorts for websites that need an update.
- WPX-4969: Add 'Update' button to websites table for staged sites.
- WPX-5029: Update wp-toolkit-cpanel to version 6.6.0-9004.
- WPX-5039: Fix some styles in the Themes tab.
- Implemented Case:
 - WPX-4799: Display current Disk Space Usage of an account in the website lister interface.
 - WPX-4865: Set new default values for 'upload_max_filesize' and 'post_max_size' in php.ini to '32M'.

- MOONS-1743: Angular 16 and dependency library upgrades.
- RE-600: Reduce timeouts in DNS Cluster interface by extending peer timeouts from 7->15.
- RE-616: Fix bug in Cpanel::NameServer::Conf::BIND where the disk cache was never consulted.
- RE-643: Fix invalid NFTables configuration after installation on some systems.
- RE-645: Update Munin to resolve directory ownership inconsistency.
- RE-671: Updated cpanel-unbound to 1.21.0.
- RE-676: Retire the cpanel-dovecot-xaps package and the associated UI in WHM for installing APNS certs.
- RE-677: Update cpanel-dovecot to 2.3.21-1cp108.
- RE-736: Default to hiding the password when creating an account via the CLI.
- RE-739: Update cpanel-php83 to v8.3.11.
- RE-742: Update scripts/migrate-pdns-conf to remove or rename config keys changed since the last update of the PowerDNS package.
- RE-742: Update cpanel-pdns to 4.9.1-2.cp112.
- RE-758: Update cpanel-git to 2.46.1-1.cp118.
- RE-779: Require oniguruma system package on RHEL systems to preserve existing installs on upgrade.

2024-08

124.1.5

released on 2024-08-29

WP2 related changes

- Fixed Case(s):
 - WPX-2785: Improve onboarding workflow by providing user with event based updates as website is being configured.
 - WPX-3749: Allow cPanel accounts to be migrated to WP2.
 - WPX-4065: Fix bug in db governor install process.
 - WPX-4188: Add Simple::Accessor to fix-cpanel-perl.
 - WPX-4205: Extend timeout for scheduled backups.
 - WPX-4226: Update wp-toolkit-cpanel to 6.6.0-8779.

cPanel related changes

- Fixed Case(s):
 - HB-7784: Increase the max threads limit on account transfers.
 - QUACKEN-14: Add hooks for Server Profile changes.
 - RE-562: Fix Support Access Request popup in WHM when 2fa is enabled for the administrator's login.
 - RE-595: Update phpPgAdmin to 7.13.0-3.cp110 to patch a PHP 8 compatibility issue.
 - RE-610: Update cpanel-php83 to v8.3.10.
 - RE-635: Prevent 3rdparty installs from cPanel locking when they try to install things.

124.1.4

released on 2024-08-16

WP2 related changes

- Fixed Case(s):
 - WPX-4071: Fix bad UX for user at max websites limit trying to create more websites.
 - WPX-4097: Prevent whitespace in 'Reset Password' password form inputs.
 - WPX-4133: Fix a failure when calling the WP Toolkit clone function while cloning a site.
 - WPX-4145: Fix broken scheduled backups dialog.

cPanel related changes

- Fixed Case(s):
 - RE-590: Fixed GZIP environment variable warnings that were emitted into the backup logs.

124.1.2

released on 2024-08-14

WP2 related changes

- Fixed Case(s):

- WPX-2815: Add support for locale selection during onboarding and in the account profile.
- WPX-3643: Hide the CDN token management interface when all websites are managed by host CDN configurations.
- WPX-3825: Custom icons now work in login pages and in all website creation and onboarding pages.
- WPX-3827: Backups system now respects package limits set for automatic backups too.
- WPX-3894: Add a role to enable and disable reseller functionality.
- WPX-3916: Ensure CloudLinux Pro license registration happens successfully.
- WPX-3920: SSL panel is now controlled by the feature API.

cPanel related changes

- Fixed Case(s):
 - CPANEL-44101: Fix bug post login where additional get params were not passed along when goto_uri was active.
 - HB-7675: The "Advanced Zone Editor" ACL is enabled by default on fresh installs.
 - HB-7697: Make 'Integration Links' a configurable option for backups and transfers.
 - HB-7745: Silence locale string format warnings during backups.
 - QUACKEN-14: Add hooks for Server Profile changes.
 - RE-360: Update cpanel-pdns 4.9.1-1.cp122.
 - RE-366: Update cpanel-unbound to 1.20.0-1.cp110.
 - RE-449: Fix issue where the ipaliases service could sometimes start before the network adapter configured as ETHDEV was ready on systems using NetworkManager.
 - RE-488: Add cpanel-boost-devel to the cpanel-devel target in rpm.versions.
 - ZC-11958: WHMAPI and UAPI compatibility for experimental/unsupported non-standard ALIAS records.
- Implemented Case(s):
 - QUACKEN-359: Angular apps and plugin localization.

2024-07

124.1.1

released on 2024-07-24

WP2 related changes

- Fixed Case(s):
 - WPX-2986: Update consent page styles.
 - WPX-3419: Provide an API to register a website migrated manually.
 - WPX-3451: NPS surveys should begin to appear for customers correctly.
 - WPX-3460: Add customizable HTML pages for WHM HTTP errors.
 - WPX-3711: Update wp-toolkit-cpanel to 6.5.0-8604.
 - WPX-3750: Add a UAPI method to indicate if a user can configure account CDNs.
 - WPX-3791: Fix frontend issue **PHP Settings Error** blocking access to the **Advanced Tab**.
 - WPX-3805: Remove useless deferred targets during installation.
 - WPX-3821: Fix broken table margins in Account Settings > CDN interface.
 - WPX-3840: Correct the logic for the global WPTK setup.
 - WPX-3880: Fix exception that occurred when running the wp2_setup_wptk install task.
- Implemented Case(s):
 - WPX-2843: Start using wp2.host instead of cprapid.com for hostname.
 - WPX-3574: Implement WHM API 1 calls to control CDN host mode.

cPanel related changes

- Fixed Case(s):
 - CPPX-18627: phpMyAdmin and phpPgAdmin open their own tab.
 - RE-395: Fixed the 'License User Limit Exceeded' banner.
 - RE-414: Added the ability to read DMI tables on systems running SMBIOS v3.
 - RE-471: Improve criteria for detecting cgroup containers.
 - RE-532: Update cpanel-ioncube to 13.3.0-1.cp110 (contains PHP 8.3 loaders).
 - RE-536: Update cpanel-php83 to v8.3.9.

124.1.0

released on 2024-07-10

WP2 related changes

- Fixed Case(s):
 - WPX-3133: Add backup quotas to be set at a package level by the WHM user.

- WPX-3158: Fix various icon buttons failing accessibility rules.
- WPX-3304: Add customizable HTML pages for WHM HTTP errors.
- WPX-3519: Update onboarding page image.
- WPX-3569: Update tooltip text for CDN when config is managed by host to be more informative to WP2 user.
- WPX-3585: In the forward dialog, the subdomain input no longer allows for duplicate domains, similar to the domains input.
- WPX-3616: Fix a bug where an existing domain can be forwarded to an addon domain.
- WPX-3624: Fix a bug where '&' was rendered incorrectly.
- WPX-3639: Modify account correctly updates user settings without altering the package.
- WPX-3645: Remove 'Clear' button from log view datepicker and improve user experience when filtering logs by date.
- WPX-3655: Update Extendify partner prefix to use 'CP-'.
- WPX-3664: Ensure newly created domains are configured to use 'remote' mail routing.
- WPX-3680: MariaDB 10.11 is now the default MySQL version.
- WPX-3696: Improve log view experience by opening log view in separate browser context.
- WPX-3704: Fix failing 'bootstrap_wp2' script.
- WPX-3710: Fix password visibility for login page.
- Implemented Case(s):
 - WPX-2989: Implement a 'View Log' interface so that a user may be able to quickly view log output, without downloading the data.

cPanel related changes

- Fixed Case(s):
 - CPANEL-44216: Remove default public grants on MariaDB 10.11.
 - CPANEL-45617: Avoid "Service SSL Certificate Expires Soon" notification by renewing hostname certificates at the 30 day mark.
 - CPANEL-45637: Update GeoIP to 122.0-2.cp122.
 - CPANEL-45638: Update cpanel-geoipfree-data to 124.0-1.cp124.
