ZKTeco ZKBioSecurity is vulnerable to cross-site scripting, caused by improper validation of user-supplied input by the authRoleAction/getAll.action script. A remote attacker could exploit this vulnerability using the filter:authGroupSet.id parameter in a specially-crafted URL to execute script in a victim's Web browser within the security context of the hosting Web site, once the URL is clicked. An attacker could use this vulnerability to steal the victim's cookie-based authentication credentials.

Consequences:

Cross-Site Scripting
