Element Pack Pro Version 10.0.3 Released

New Feature Improvement Fix

Fixed

- Google Reviews: reviews are now cached separately for each language, so translated pages (WPML, Polylang) show reviews in their own language instead of sharing one cache
- Advanced Google Map: the Map Height setting had no effect

Added

- Google Reviews: French added to the Filter Reviews Language list

Element Pack Pro Version 10.0.2 Released

New Feature Improvement Fix

Fixed

- Live Copy and Live Paste in the editor's right-click menu now copy and paste elements instead of showing a "deprecated" message

Updated

- Custom CSS / JS is now marked as a Pro feature in the dashboard

---

25 Oct, 2026

Element Pack Pro Version 10.0.1 Released

Improvement Fix

Updated

- Translation template (.pot) regenerated from the current code: it now includes the AI Tools, Dashboard and Setup Wizard strings, and no longer carries those of the widgets moved to Element Pack Addon

---

Element Pack Pro Version 10.0.0 Released

New Feature Improvement Fix Announcement Element Pack

10.0.0 [12th October 2026]

Added

Angie

- AI Tools: abilities registered with the WordPress Abilities API (WP 6.9+)
- AI Tools: MCP server endpoint at `/wp-json/element-pack/mcp` for Claude, Cursor, VS Code and ChatGPT
- AI Tools: Angie integration
- AI Tools: admin screen with master switches, per-ability toggles and connection snippets
- 31 abilities for widgets, pages, integrations, design system and maintenance
- Accessibility improvements for all widgets

Removed

- 85 deprecated widgets moved to the new "Element Pack Addon" plugin, with the same names and toggles
- Vendor scripts used only by those widgets (darkmode, timeline, slinky, honeycombs)
- Leftover Easy Digital Downloads entry in third-party widgets
- Unused Image Parallax, WC Products table and Text Read More assets

Fixed

- Setup Wizard activate issue fixed
- Elementor editor console errors fixed
- Elementor editor: links in Modal, Coupon Code, SVG Maps and Mega Menu no longer navigate the preview away
- Fixed unescaped output some widgets
- Fixed PHP 8 fatal errors in Content Switcher, Business Hours, QR Code, Modal, Image Compare, Table of Content and SVG Blob
- SVG Image Draw SVG animation now plays in the editor

Security

- UIkit: HTML parsed from a component option or fetched for an inline SVG now drops iframe, frame, form, meta, link, object and embed elements, srcdoc and is attributes, and URL attributes whose scheme hides behind control characters (java	script:); only http(s), mailto, tel, relative and fragment URLs are kept, plus data:image on media elements (reported by nh4tvd)
- Content Guard: a bdt-* / data-bdt-* attribute written after a "/" with no whitespace is stripped too; markup is now walked with the WordPress HTML API, the same parser

Updated

- Improved: Ulkit and helper CSS/JS load only on pages that use Element Pack, cutting frontend CSS by up to 40%
- Improved: Total Blocking Time up to 60% lower on pages without Element Pack widgets
- Improved: Largest Contentful Paint up to 20% faster on pages without Element Pack widgets
- Improved: Asset Optimization loads only the widgets a page uses in one combined CSS and JS file: up to 54% less CSS, pages up to 30% lighter, LCP up to 11% faster
- Clears Elementor's cached asset lists after an update or module change, so "Regenerate CSS & Data" is not needed
- Security improvements for all widgets

Element Pack Pro Version 9.9.2 Released

New Feature Improvement Fix Element Pack

Added

- Normal / Hover tab system added to the badge style section in advanced icon box widget, with new hover color, background color, border color and box shadow controls
- Simple Contact Form: new "Receive IP Information" option to include or omit the sender IP address in the notification email

Fixed

- Simple Contact Form: the submitted widget ID is now sanitized before it is used to look up widget settings on the public form endpoint
- Lightbox and Tooltip global styles now live in Site Settings instead of being registered on every page's settings, which is what caused it
- Step Flow widget: the direction arrow was missing in the Elementor editor. The editor draws the widget from its own client-side template, and that template never output the arrow markup, so it only ever appeared on the frontend

they swap in reliably when the widget is inserted or re-rendered in the editor
- Elementor > Tools no longer exhausts the PHP memory limit on sites with a large page template library

---

19 Aug, 2026

Element Pack Pro Version 9.8.14 Released

Improvement Fix Element Pack

Fixed

- Widget CSS was enqueued after on Theme Builder pages because Elementor only enables widget assets for the queried post, never for the template — Mega Menu's mobile/desktop header switch was the most visible case
- Header and footer Theme Builder templates were rendered twice per request, and the discarded first render swallowed once-per-request widget output such as Mega Menu's responsive breakpoint styles

Ultimate Post Kit Version 4.2.0 Released

New Feature Improvement Fix Ultimate Post Kit

Updated

- Security improved

Fixed

- Author role label translation issue in author, elite grid, elite carousel, post accordion and paradox slider widgets
- Clock icon alignment issue with time text in the amox carousel widget

4 Aug, 2026

Ultimate Post Kit Pro Version 4.2.0 Released

New Feature Improvement Fix Ultimate Post Kit

Added

- Added Item Limit option in the Query section of the stone hover widget
- Added mousewheel scroll support to the atlas slider widget
- Added Item Limit option in the Query section of the forbes tabs widget

Updated

- Security improved
- Reorganized the sline slider widget style panel into separate sections with proper conditional visibility

Fixed

- Fixed output escaping issues in multiple widgets
- Pause on hover control now only displays when autoplay is enabled
- Show Author and Show Time controls are not working in the optick slider widget
- Title Hide On, Text Hide On and Author Hide On controls not working in the optick slider widget
- Missing spacing between date and time in the atlas slider, berlin slider, checkerboard and classic list widgets
- Space Between control not working in the meta style section of the sline slider widget
- Missing spacing between clock icon and time text in the sline slider widget
- Reading progress circle widget showing NaN% on some themes and in the Elementor editor
- Missing separator and spacing between date, time, and reading time in the stone hover widget
- Extra bottom gap in the social link widget Elementor editor preview
- Show Time control not working in the eldora carousel widget

- Timeline count numbers not updating when navigating pagination in the snap timeline widget
- Progress position control not working in the wixer carousel widget
- PHP warnings when switching tabs in the holux tabs widget

Element Pack Pro Version 9.8.9 Released

New Feature Improvement Fix Element Pack

Added

- WooCommerce integration with AJAX add-to-cart added in Price Table widget (footer button turns into a View Cart button after add, matching the EDD flow)

Fixed

- Visibility Controls "Country" condition not working issue fixed
- Calendly widget time control issue fixed
- Text Gradient Background extension ignoring custom gradient colors on headings issue fixed
- Post widgets (Post Grid, Post Block, Post List, etc.) query source and manual selection no longer list internal template post types — Theme Builder templates (`bdt-template-builder`), Mega Menu content, and Floating Elements are now excluded so only real content post types can be queried

Updated

- SEO issue fixed in Wrapper Link extension
- Price Table EDD and WooCommerce product selectors now use AJAX search instead of a limited preloaded list
- Security improved
- Breakpoint improved as Elementor in Mega Menu widget

26 Jul, 2026

Ultimate Post Kit Version 4.1.18 Released

Improvement Fix Ultimate Post Kit

Fixed

- Output escaping issues in multiple widgets
- Pause on Hover control now only displays when Autoplay is enabled in slider, carousel, and news ticker widgets
- Resolved conditional logic mismatch in the timeline and snog slider widgets
- Title visibility issue in the recent comments widget
- Taxonomy dropdown now displays the correct term count in widget query controls
- The broken category design issue in the post accordion widget

Updated

- Pholox Slider style controls reorganized into separate sections with correct conditional visibility for title, category, meta, and thumbs options
