Feature Rich

Ghostscript's breadth of features including imposition, superior color management, native rendering to raster and conversion to vector formats, and custom screening technologies deliver high-quality color reproduction and printing with every job.

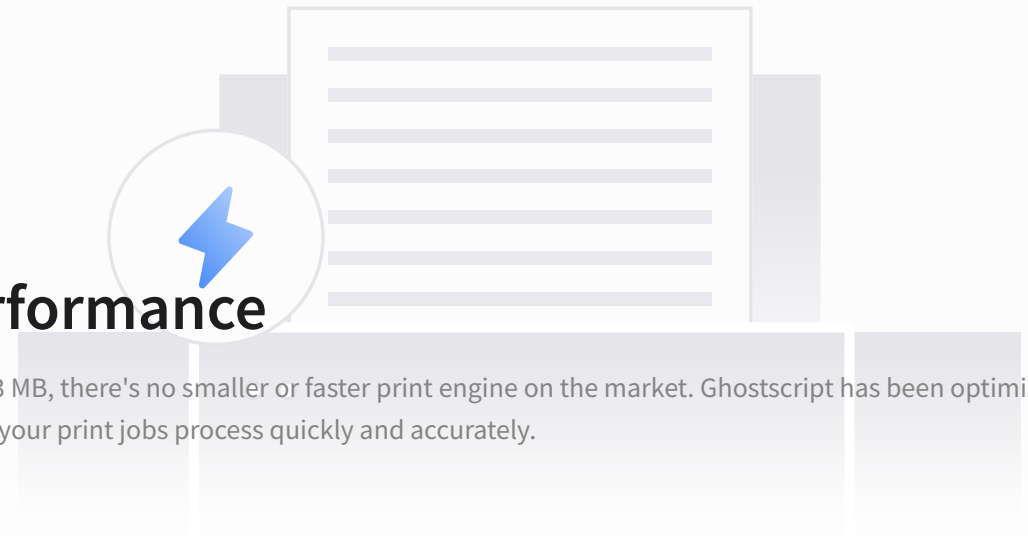

Compatibility

Written entirely in C, Ghostscript runs on most operating systems and platforms including Windows, macOS, the wide variety of Unix and Unix-like platforms, VMS and many embedded systems.

Performance

At just 3 MB, there's no smaller or faster print engine on the market. Ghostscript has been optimized to ensure your print jobs process quickly and accurately.

Quality Assurance

Our rigorous, continuous benchmark testing, including daily regression testing of code and QualityLogic conformance testing, ensures the highest quality performance available.

Range of Uses

Ghostscript integrations range from host-based, embedded, SaaS and cloud solutions. The Ghostscript engine has been used in printers, MFPs, RIPs, document management systems, PDF generation tools, and cloud-based printing.

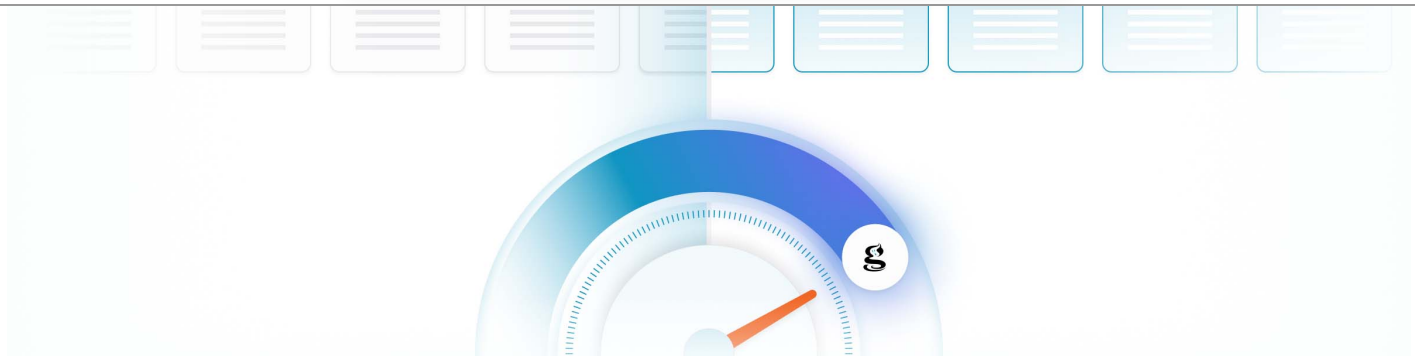

Flexible

Our wide array of device drivers and external library support enable endless customization options to ensure Ghostscript fits your project needs.

ghostscript

File Conversion

Convert PDFs to various formats with ease. Ghostscript provides robust conversion capabilities, ensuring high-quality output for all your document processing needs.

Powerful PDF Compression

Reduce file sizes without losing quality. Whether you want to compress PDFs for faster load times, storage efficiency, or SaaS applications, Ghostscript delivers enterprise-grade compression with full control over settings.

DOCX

We've added the ability to output to the Microsoft Word “docx” format with our newly implemented “docxwrite” device.

Map Text to Black

Text drawn by an input job can be forced to draw in solid black. This applies to text fill and text stroke operations.

ghostscript

Enhanced N-up Functionality

N-up imposition functionality has been expanded to handle all input file types including PDF, PCL, XPS, as well as improved handling of PostScript.

Language Bindings

Bindings for Python, C#, and Java have been added for the gsapi interface. Demos and sample apps are available for review.

OCR

We've added OCR device support to Ghostscript as of the 9.53 release. Convert printed paper documents, scanned raster images, digital camera images, etc. into searchable PDF text documents.

Cobalt Acceleration Library

The Cobalt Acceleration Library (CAL) is designed to deliver significant performance enhancements to both embedded and host-based systems. CAL delivers superior speed and print quality.
