## # V2Board ≤ 1.7.4 Multiple Vulnerabilities

**\*\*Vendor\*\***: V2Board (github.com/v2board/v2board) – unmaintained since 2023  
**\*\*Affected\*\***: ≤ 1.7.4 (all versions; project abandoned)  
**\*\*Reporter\*\***: Feng Ning, Innora Security Research ([feng@innora.ai](mailto:feng@innora.ai))  
**\*\*Disclosure\*\***: 2026-04-30

CVE	Type	CWE	Location
<a href="#">CVE-2026-37503</a>	Stored XSS	CWE-79	theme configuration custom_html
<a href="#">CVE-2026-37504</a>	Sensitive Token Exposure	CWE-598	Server/UniverseContro
<a href="#">CVE-2026-37505</a>	SQL Injection	CWE-89	Admin/UserController ORDER BY

---

### ## CVE-2026-37503 – Stored XSS via custom\_html

Theme configuration renders the `custom\_html` field through Blade's unescaped

**\*\*Fix\*\***: switch to `{{ }}` escaped output, or apply `wp\_kses`-equivalent filter

---

### ## CVE-2026-37504 – server\_token Exposed via GET

In `app/Http/Controllers/Server/UniverseController.php`, the `server\_token` r

**\*\*Fix\*\***: move token acceptance to a request header or POST body. Query parame

---

**## CVE-2026-37505 – SQL Injection via ORDER BY**

`app/Http/Controllers/Admin/UserController.php` builds its `ORDER BY` clause

**\*\*Fix\*\***: validate column names against a hard-coded allowlist; the direction
