Contributor

Optimize the `get_object_or_404` calls to filter Engagement and Engagement_Presets by their respective relationships, improving data retrieval efficiency. This change enhances the integrity of the data being accessed in the views.

Contextual Security Analysis

Please give this pull request extra attention during review.

This pull request introduces a view that can allow IDOR: the updated answer_questionnaire view in `dojo/survey/views.py` only ensures the survey belongs to the engagement but still allows access to the engagement via user-provided IDs when `allow_anonymous_survey_repsonse` is enabled, letting unauthenticated users guess engagement and survey IDs to read/modify surveys — unlike other views protected by `@user_is_authorized`.

► **Potential IDOR Vulnerability in** `dojo/survey/views.py` (e4da6820)
