Out-of-Bounds Read in Router Advertisement Option Parser in FreeRTOS-Plus-TCP

Moderate archigup published GHSA-gffr-xgjj-jh9j 3 hours ago

Package

No package listed

Affected versions

$\geq V4.0.0$ AND $\leq V4.2.5$, $\geq V4.3.0$ AND $\leq V4.4.0$

Patched versions

V4.2.6, V4.4.1

Description

Summary

FreeRTOS-Plus-TCP is an open source TCP/IP stack implementation specifically designed for FreeRTOS. The stack provides a standard Berkeley sockets interface and supports essential networking protocols including IPv6, ARP, DHCP, DNS, LLMNR, mDNS, NBNS, RA, ND, ICMP, and ICMPv6.

A bounds-read issue exists in FreeRTOS-Plus-TCP's IPV6 Router Advertisement (RA) packet processing, where an incorrect length value can cause the system to read beyond the allocated memory buffer.

Impact

In the FreeRTOS-Plus-TCP IPV6 Router Advertisement processing which may allow an unauthenticated adjacent-network actor to compromise devices via rogue RA packet.

A section of Router Advertisement options lacks sufficient validation of length fields during packet parsing, allowing in memory operations without proper bounds checking. This can lead to out-of-bounds memory reads. This issue can be exploited by any device on the local network that can send crafted Router Advertisement packets.

New version v4.2.6 and v4.4.1 adds additional input validation to the RA option parser to reject malformed values before they reach sensitive operations.

Any device using FreeRTOS-Plus-TCP versions V4.0.0 through V4.2.5 and V4.3.0 through V4.4.0 , processing Router Advertisement packets is affected by this risk. Update to version [V4.4.1](#) or [V4.2.6](#) or later to fix this.

Patches

This issue has been addressed in FreeRTOS-Plus-TCP version [V4.4.1](#) and [V4.2.6](#). We recommend upgrading to the latest version and ensuring any forked or derivative code is patched to incorporate the new fixes.

Workarounds

Implement network-level filtering to block untrusted Router Advertisement packets on the local network segment

Deploy devices on isolated network segments where rogue RA packets cannot be injected

References

If you have any questions or comments about this advisory, we ask that you contact AWS Security via our [issue reporting page](#) or directly via email to aws-security@amazon.com. Please do not create a public GitHub issue.

Acknowledgement

We would like to thank [@Eun0us](#) from Espilon for collaborating on this issue through the coordinated issue disclosure process.
