Checklist

Reviewing is a process done by project maintainers, mostly on a volunteer basis. We try to keep the overhead as small as possible and appreciate if you help us to do so by completing the following items. Feel free to ask in a comment if you have troubles with any of them.

For all pull requests:

- Confirm you have read the [contribution guidelines](#)
- You have sent a Contribution Licence Agreement (CLA) as necessary (not required for small changes, e.g., fixing typos in the documentation)
- Make sure the first PR targets the master branch, eventual backports will be managed later. This can be ignored if the PR is fixing an issue that only happens in a specific branch, but not in newer ones.

The following are required only for core and extension modules (they are welcomed, but not required, for contrib modules):

- There is a ticket in <https://github.com/GeoNode/geonode/issues> describing the issue/improvement/feature (a notable exemption is, changes not visible to end-users)
- The issue connected to the PR must have Labels and Milestone assigned
- PR for bug fixes and small new features are presented as a single commit
- PR title must be in the form "[Fixes #<issue_number>] Title of the PR"
- New unit tests have been added covering the changes, unless there is an explanation on why the tests

are not necessary/implemented

Submitting the PR does not require you to check all items, but by the time it gets merged, they should be either satisfied or inapplicable.

Summary of Changes

Hello, I'm Gemini Code Assist^[1]! I'm currently reviewing this pull request and will post my feedback shortly. In the meantime, here's a summary to help you and other reviewers quickly get up to speed!

This pull request addresses an issue where the system was attempting to generate thumbnails for documents uploaded via a remote URL. The change introduces a conditional check to ensure that thumbnail generation only occurs for locally uploaded documents, thereby optimizing resource usage and preventing irrelevant processing for remote content.

Highlights

- **Remote Document Thumbnailing:** Thumbnail generation is now conditionally disabled for remote documents during the upload process, preventing unnecessary processing for external URLs.

 **New Feature in Public Preview:** You can now enable **Memory** to help **Gemini Code Assist** learn from your team's feedback. This makes future code reviews more consistent and personalized to your project's style. Click [here](#) to enable Memory in your admin console.

Code Review

This pull request correctly disables thumbnail generation for remote documents by checking for the presence of `doc_url` before attempting to create a thumbnail. The logic is sound. I've provided one suggestion to improve code clarity by using the `is_local` property on the `Document` model, which makes the intent more explicit and improves maintainability.
