In previous commit [a4dd9c0](#), the decode of vopm are divided into vopmvv (funct3=OPMVV) and vopmvx (funct3=OPMVX).

However, some instructions are incorrectly duplicated in both categories, e.g., there is only vredxor.vv but no vredxor.vx, but vredxor is put in both vopmvv and vopmvx. This commit removes those incorrect decodes.

Fix [#952](#).
