## Issue(s)

## Steps to test or reproduce

## Further comments

## Summary by CodeRabbit

- **Bug Fixes**
  - Security hotfix for OAuth2 authentication token handling to strengthen API authentication and prevent malformed token abuse.
- **Tests**
  - Added end-to-end tests ensuring malformed or malicious access token requests are rejected and return proper JSON error responses.

## Walkthrough

Refactors OAuth2 authentication: middleware extracts authorization header and access\_token (from query), passes a simplified { authorization, accessToken } object to the OAuth2 server auth function whose signature was updated. Adds tests that assert malformed access\_token query payloads are rejected with 401. Adds a changeset documenting a patch security hotfix.

## Changes

Cohort / File(s)	Summary
<b>Changeset</b> <code>\.changeset/blue-points-dream.md</code>	Adds a patch changeset recording a security hotfix for <code>@rocket.chat/meteor</code> .
<b>OAuth2 Authentication</b> <code>apps/meteor/app/api/server/middlewares/authentication.ts</code> , <code>apps/meteor/app/oauth2-server-config/server/oauth/oauth2-server.ts</code>	Middleware no longer forwards full <code>req.headers / req.query</code> ; it extracts <code>authorization</code> and <code>access_token</code> (removes <code>access_token</code> from query) and passes <code>{ authorization, accessToken }</code> to updated <code>oAuth2ServerAuth</code> which now accepts that partial request shape and derives the token from <code>authorization</code> or <code>accessToken</code> .
<b>Security Tests</b> <code>apps/meteor/tests/end-to-end/api/oauth-server.ts</code>	Adds end-to-end tests asserting <code>/oauth/me</code> rejects malformed <code>access_token</code> query payloads with <code>401</code> and a JSON error indicating login required.

/backport 7.13.5

**dionisio-bot** (Bot) commented [on Mar 10](#)

Contributor

Sorry, I couldn't do that backport because of conflicts. Could you please solve them?

you can do so by running the following commands:

```
git fetch
git checkout backport-7.13.5-39492
git cherry-pick f4dcad44d578b1ac325cd0249c35c491004a1b30
```

```
// solve the conflict
git push
```

after that just run `/backport 7.13.5` again
